Nilpotent Orbits in Representation Theory

Jens Carsten Jantzen

Introduction	1
1 Nilpotent Orbits for Classical Groups	3
2 Some General Results	14
3 Centralizers in the Classical Cases	23
4 Bala–Carter Theory	35
5 Centralizers	47
6 The Nilpotent Cone I	62
7 The Nilpotent Cone II	71
8 Functions on Orbits and Orbit Closures	87
9 Associated Varieties	111
10 Springer’s Fibers and Steinberg’s Triples	128
11 Paving Springer’s Fibers	144
12 ℓ -adic and Perverse Stuff	162
13 Springer’s Representations	183
References	206

Infinite-Dimensional Groups and Their Representations

Karl-Hermann Neeb

Introduction	213
I The Finite-Dimensional Case	215
The Algebraic Approach to the Classification	216
Holomorphic Vector Bundles	217
Homogeneous Vector Bundles	218
A Key Example: $SL(2, \mathbb{C})$	220
The Borel–Weil Theorem for Complex Reductive Groups	223
The Bruhat Decomposition	228
Exercises for Section I	235

II	Split Lie Algebras	237
	Root Decompositions	237
	Positive Systems	240
	Involutions on Split Lie Algebras	241
	Exercises for Section II	243
III	Unitary Highest Weight Modules	247
	Unitary Highest Weight Modules of Locally Finite Lie Algebras	247
	Some Necessary Conditions for Unilarity	251
	The Classification of Unitary Highest Weight Modules	254
	Exercises for Section III	257
IV	Banach–Lie Groups	258
	General Lie Theory for Banach–Lie Groups	258
	Linear Lie groups	264
	Algebraic Lie Subgroups	266
	Classical Banach–Lie groups of Operators	270
	Smaller Classical Groups	272
	Determinant Functions	274
	Notes on Section IV	275
	Exercises for Section IV	276
V	Holomorphic Representations of Classical Banach–Lie Groups	279
	The Norm Function of a Unitary Highest Weight Module	279
	Holomorphic Highest Weight Representations of $GL_1(H)$	282
	Notes on Section V	287
	Exercises for Section V	288
VI	Geometry of Coadjoint Orbits of Banach–Lie Groups	288
	Complex Structures on Homogeneous Spaces	294
	Complex Structures on Coadjoint Orbits	295
	Notes on Section VI	296
	Exercises for Section VI	297
VII	Coadjoint Orbits and Complex Line Bundles for $U_2(H)$	297
	Coadjoint Kähler Orbits for $u_2(H)$	298
	Construction of the Complex Line Bundles	303
	Reproducing Kernel Hilbert Spaces	309
	Realizing \mathcal{H}_λ in $\Gamma(\mathcal{L}_\lambda)$	309
	Enlarging the Groups	311
	Concluding Remarks	315
	Notes on Section VII	316
	Exercises for Section VII	317
Appendix:	The Topology of Classical Banach–Lie Groups	318
	Polar Decompositions	318
	Some General Results on Homotopy Groups	322
	Higher Order Determinants	324
References		326
