Introduction -----	3
0. Prerequisites -----	6
1. Height -----	10
2. Primary Decomposition -----	13
3. Length -----	33
4. The Principal Ideal Theorem (Hauptidealsatz) -----	36
5. Systems of Parameters -----	43
6. Polynomial Rings -----	46
7. Power Series Rings -----	53
8. The Krull Intersection Theorem -----	58
9. An Application of the Intersection Theorem to Primary Decomposition -----	65
10. Cohen-Macaulay Rings -----	69
11. R-sequences and Grade -----	76
12. Some additional properties of C-M rings -----	100
13. Regular local rings -----	110
14. Hilbert rings and the Hilbert Nullstellensatz -----	127
15. Some additional remarks on maximal ideals in polynomial rings -----	140
16. Polynomial rings over Dedekind domains -----	145
17. The Homological Machine -----	150
Exact Sequences -----	150
Projective Dimension -----	152
Projective Resolutions -----	158
Injectives -----	164
Ext(M,N) -----	167
Long exact sequences for Ext, and the connection with projective dimension -----	177
Global dimension -----	183

18.	Change of rings and dimension of polynomial rings ----	191
19.	More on change of rings -----	205
20.	Homological characterization of regular local rings --	215
21.	A homological characterization of Grade -----	228
22.	Localizing the Machine -----	238
23.	Domains of global dimension $\leq 1$ -----	248
24.	Codimension -----	252
25.	Regular local rings are UFD's -----	262
26.	Lifting Finite Free Resolutions -----	281
27.	Irreducible ideals and Gorenstein rings -----	287
28.	Local rings of Krull dimension 0 -----	305
29.	A Homological characterization of Gorenstein rings and a conjecture of Bass -----	326
30.	Suggestions for further reading -----	336
	References -----	350
