

TABLE OF CONTENTS

	Page
INTRODUCTION	iii
CHAPTER 1. BASIC TOOLS	1
0. Terminology, notation and abbreviations	1
1. Nakayama's lemma	3
2. Hilbert functions	3
3. Superficial elements	6
4. The Koszul complex, depth and multiplicity	11
5. Cohen-Macaulay and Gorenstein quotients of local Gorenstein rings	15
6. Exactness of complexes of finitely generated free modules	17
7. Two computations of heights	21
8. Coherence, uniform coherence and descent of flatness	23
CHAPTER 2. SOME COMBINATORIAL RESULTS	29
1. Extending bases	29
2. Numbers of generators of powers of an ideal	32
3. The Hilbert function for \underline{m}	40
CHAPTER 3. LOCAL RINGS OF SMALL DIMENSION	49
1. Local rings of dimension at most one	49
2. Local rings of dimension at most two	51
3. Unboundedness in dimension greater than two	58
CHAPTER 4. IDEALS GENERATED BY R-SEQUENCES	63
1. Use of the module of differentials	63
2. Use of the punctured spectrum of a local ring	65

CHAPTER 5. HOW R/I DETERMINES $v(I)$	69
1. Gorenstein ideals	69
2. Cohen-Macaulay ideals	78
3. Weakening the hypothesis on I and R	81
