

CONTENTS

Introduction	vii
Chapter I	
Filtered Rings and Modules	
§1. Topological Prerequisites	1
§2. Filtrations on Rings and Modules	3
§3. Complete Filtered Modules and Completions	10
3.1. Some properties of filtration topology	10
3.2. Equivalence of filtration topologies	11
3.3. Complete filtered modules	13
3.4. The completion of a filtered module	14
3.5. The existence of completions	23
§4. Filtrations and Associated Gradations	27
4.1. Preliminaries on gradations	27
4.2. Associated graded rings and modules	30
4.3. Dehomogenizations of grading to filtrations Rees rings (modules)	33
4.4. Finite intersection property and faithful filtrations	42
§5. Good Filtrations	46
§6. Projective and Injective Objects in R -filt	51
§7. Krull Dimension and Global Dimension of Filtered rings	60
7.1. Krull dimension of filtered rings	60
7.2. Global dimension of filtered rings	61
Chapter II	
Zariskian Filtrations	
§1. Flatness of Completion	70
1.1. Artin-Rees property of filtrations	70
1.2. Flatness of completion	74
§2. Zariskian Filtrations	83
2.1. Definition and various characterizations	83
2.2. Examples of Zariskian filtration	87
§3. Lifting Structures of Zariski Rings	95
3.1. $G(R)$ is gr-Artinian, gr-regular or Von Neuman gr-regular	95
3.2. $G(R)$ is a gr-maximal order	96
§4. Zariskian Filtrations on Simple Artinian Rings	103

§5. Global Dimension of Rees Rings Associated to Zariskian Filtrations	110
5.1. Addendum to graded homological algebra	110
5.2. Global dimension of Rees rings	118
§6. K_0 of Rings with Zariskian Filtration	121

Chapter III

Auslander Regular Filtered (Graded) Rings

§1. Spectral Sequence Determined by a Filt-complex	127
1.1. Spectral sequence determined by a filt-complex	127
1.2. Spectral sequence determined by a complete filt-complex	134
1.3. Double complexes and their spectral sequences	137
1.4. An application to Noetherian regular rings	144
§2. Auslander Regularity of Zariskian Filtered Rings	148
2.1. An introduction to Auslander regularity	148
2.2. Auslander regularity of Zariskian filtered rings	150
2.3. Auslander regularity of polynomial rings	153
2.4. Examples of Auslander regular rings	156
2.5. $j_R(M) = j_{G(R)}(G(M)) = j_{\widehat{R}}(\widehat{M}) = j_{\widehat{R}}(\widehat{M})$	157
§3. Auslander Regularity of Graded Rings	161
3.1. Auslander regularity of Rees rings	161
3.2. Good graded filtrations	164
3.3. gr-Auslander regular rings are Auslander regular	168
3.4. Applications to invertible ideals	172
§4. Dimension Theory and Pure Module Theory over Zariskian Filtered Rings with Auslander Regular Associated Graded Rings	176
4.1. Generalized Roos theorem and an application to Zariski rings	176
4.2. Pure (holonomic) modules over Zariski rings	183
4.3. Codimension calculation of Characteristic varieties	195

Chapter IV

Microlocalization of Filtered Rings and Modules, Quantum Sections and Gauge Algebras

§1. Algebraic Microlocalization	200
§2. Quantum Sections and Microstructure Sheaves	211
§3. Generalized Gauge Algebras	227
§4. Quantum Sections of Enveloping Algebras	241
References	246
Subject Index	251
