

## Content

§ 1	Compatibilities of algebraic and topological structures on a set. The $m$ -adic topology. Artin-Rees lemma. Krull's intersection theorem. Zariski rings. . . . .	1
§ 2	Completions of filtered groups, rings and modules. Applications to $m$ -adic topologies . . . . .	7
§ 3	Rings of formal and restricted power series. Preparation theorems. Hensel lemma . . . . .	16
§ 4	Completions of finitely generated modules. Flatness and faithful flatness . . . . .	21
§ 5	Noetherian properties of $m$ -adic completions . . . . .	26
§ 6	Some general criteria of ascent and descent for $m$ -completions . . . . .	29
§ 7	Dimension of $m$ -completions . . . . .	33
§ 8	Regularity and global dimension of $m$ -completions . . . . .	36
§ 9	"Cohen Macaulay" and "Gorenstein" properties for $m$ -completions . . . . .	40
§ 10	Integrity of $m$ -completions . . . . .	44
§ 11	Unique factorization of $m$ -completions . . . . .	48
§ 12	Fibers of a ring homomorphism and formal fibers of a ring . . . . .	56
§ 13	Properties $S_n$ and $R_n$ for $m$ -completions . . . . .	59
§ 14	Analytic reducedness . . . . .	64
§ 15	Normality of $m$ -completions . . . . .	67
	References . . . . .	70
	Subject Index . . . . .	73
