Preface	
Terminology	
Chapter 1 Valuations of fields	
1. Valuation rings	1
2. Valuations	5
3. The ideal structure of a valuation ring	10
4. Examples of non-invariant valuations	13
Chapter 2 Valuation topologies and the approximation theorem	
5. V -topologies	30
6. Topologies induced by valuations	34
7. The intersection of a finite number of valuation rings	38
8. Independence of valuations	45
Chapter 3 Valued vector spaces	
9. Normed vector spaces	51
10. Valued vector spaces	56
11. Finitely generated B -modules	60
12. The I -hull and the I -kernel of a submodule	69
Chapter 4 Projective Hjelmslev spaces	
13. Definition of the projective Hjelmslev spaces H_I	75
14. The union and intersection sets in H_I	80
15. Some further properties of valuation rings	85
16. Uniqueness in H_I	87
Appendix Locally invariant valuations by J. Graeter	94
Solutions	102
References	112
Index	116
