Preface v

Notations xi

CHAPTER 0
Introduction 1

CHAPTER 1
Absolute Values of Fields 3
1.1. First Examples 3
1.2. Generalities About Absolute Values of a Field 6
1.3. Absolute Values of $\mathbb{Q}$ 13
1.4. The Independence of Absolute Values 16
1.5. The Topology of Valued Fields 19
1.6. Archimedean Absolute Values 32
1.7. Topological Characterizations of Valued Fields 43

CHAPTER 2
Valuations of a Field 55
2.1. Generalities About Valuations of a Field 55
2.2. Complete Valued Fields and $\mathbb{Q}_p$ 67

CHAPTER 3
Polynomials and Henselian Valued Fields 79
3.1. Polynomials over Valued Fields 79
3.2. Henselian Valued Fields 94

CHAPTER 4
Extensions of Valuations 107
4.1. Existence of Extensions and General Results 107
4.2. The Set of Extensions of a Valuation 118

CHAPTER 5
Uniqueness of Extensions of Valuations and Poly-Complete Fields 127
5.1. Uniqueness of Extensions 127
5.2. Poly-Complete Fields 146

CHAPTER 6
Extensions of Valuations: Numerical Relations 151
6.1. Numerical Relations for Valuations with Unique Extension 151
6.2. Numerical Relations in the General Case 158
6.3. Some Interesting Examples 172
6.4. Appendix on p-Groups 178

CHAPTER 7
Power Series and the Structure of Complete Valued Fields 185
7.1. Power Series 185
7.2. Structure of Complete Discrete Valued Fields 193

CHAPTER 8
Decomposition and Inertia Theory 213
8.1. Decomposition Theory 213
8.2. Inertia Theory 217

CHAPTER 9
Ramification Theory 227
9.1. Lower Ramification Theory 227
9.2. Higher Ramification 244

CHAPTER 10
Valuation Characterizations of Dedekind Domains 263
10.1. Valuation Properties of the Rings of Algebraic Integers 263
10.2. Characterizations of Dedekind Domains 280
10.3. Characterizations of Valuation Domains 288

CHAPTER 11
Galois Groups of Algebraic Extensions of Infinite Degree 307
11.1. Galois Extensions of Infinite Degree 307
11.2. The Abelian Closure of $\mathbb{Q}$ 320

CHAPTER 12
Ideals, Valuations, and Divisors in Algebraic Extensions of Infinite Degree over $\mathbb{Q}$ 333
12.1. Ideals 334
12.2. Valuations, Dedekind Domains, and Examples 339
12.3. Divisors of Algebraic Number Fields of Infinite Degree 356

CHAPTER 13
A Glimpse of Krull Valuations 365
13.1. Generalities 365
13.2. Integrally Closed Domains 369
13.3. Suggestions for Further Study 372

APPENDIX
Commutative Fields and Characters of Finite Abelian Groups 373
A.1. Algebraic Elements 373
A.2. Algebraic Elements, Algebraically Closed Fields 374
A.3. Algebraic Number Fields 375
A.4. Characteristic and Prime Fields 375
A.5. Normal Extensions and Splitting Fields 376
A.6. Separable Extensions 377
A.7. Galois Extensions 378
A.8. Roots of Unity 379
A.9. Finite Fields 381
A.10. Trace and Norm of Elements 381
A.11. The Discriminant 382
A.12. Discriminant and Resultant of Polynomials 383
A.13. Inseparable Extensions 385
A.14. Perfect Fields 386
A.15. The Theorem of Steinitz 386
A.16. Orderable Fields 387
A.17. The Theorem of Artin 388
A.18. Characters of Finite Abelian Groups 388
