PREFACE	ix
1. Introduction	
Line Integrals and Independence of Path	1
Categories and Functors	3
Tensor Products	7
Singular Homology	17
2. Hom and \otimes	
Modules	24
Sums and Products	28
Exactness	34
Adjoins	36
Direct Limits	39
Inverse Limits	49
3. Projectives, Injectives, and Flats	
Free Modules	57
Projective Modules	62
Injective Modules	65
Watts' Theorems	75
Flat Modules	84
Purity	94
Localization	97
4. Specific Rings	
Noetherian Rings	108

Semisimple Rings	115
Von Neumann Regular Rings	119
Hereditary and Dedekind Rings	120
Semihhereditary and Prüfer Rings	127
Quasi-Frobenius Rings	130
Local Rings and Artinian Rings	133
Polynomial Rings	138
5. Extensions of Groups	150
6. Homology	
Homology Functors	166
Derived Functors	178
7. Ext	
Elementary Properties	194
Ext and Extensions	202
Axioms	211
8. Tor	
Elementary Properties	220
Tor and Torsion	224
Universal Coefficient Theorems	227
9. Son of Specific Rings	
Dimensions	233
Hilbert's Syzygy Theorem	242
Serre's Theorem	251
Mixed Identities	256
Commutative Noetherian Local Rings	258
10. The Return of Cohomology of Groups	
Homology Groups	266
Cohomology Groups	280
Computations and Applications	292
11. Spectral Sequences	
Exact Couples and Five-Term Sequences	299
Derived Couples and Spectral Sequences	311
Filtrations and Convergence	315
Bicomplexes	319
Künneth Theorems	336
Grothendieck Spectral Sequences	350
More Groups	355
More Modules	358
References	367
INDEX	371
