

Contents

<i>Preface</i>	vii
<i>Chapter 1.</i> Elements of the Theory of Invariance	1
1. The Notion of an Invariant.	1
2. Rational Concomitants.	3
<i>Chapter 2.</i> Rational Representations of the General Linear Group	9
1. Representations of Linear Groups.	9
2. Representations of the Full Linear Group	13
3. Young's Diagrams	15
4. The Characters of $\mathbf{GL}(n; \Omega)$	19
5. Multilinear Invariants of $\mathbf{GL}(n; \Omega)$	21
6. Invariants of Antisymmetric Tensors	25
7. Invariants of Mixed Tensors	27
8. Gram's Theorem	30
9. Invariants of n -ary Forms: The Symbolic Method	31
10. Invariants of Subgroups of $\mathbf{GL}(n; \Omega)$	36
<i>Chapter 3.</i> Post-Hilbert Invariant Theory	41
1. The Finiteness Theorem.	41
2. The Nagata Counterexample	45
<i>Chapter 4.</i> Introduction to the Hilbert–Mumford Theory	53
1. The Affine Case	53
2. The Projective Case	56
3. Nullforms and Semi-Stable Points.	57
4. The Hilbert–Mumford Criterion	58
5. Examples	62
6. Applications of Nullforms to Problems of Explicit Determination of Invariants	65
<i>Appendix:</i> A Short Digest of Non-Commutative Algebra	71
<i>Bibliography</i>	85
