PREFACE	ix
CHAPTER I    AFFINE ALGEBRAIC SETS	
1. Algebraic sets in affine space	1
2. Affine algebraic sets in abstracto	7
3. Noetherian rings	14
4. Decomposition of affine algebraic sets	20
5. Products of affine algebraic sets	22
6. Examples of affine algebraic sets	31
7. The function field of an affine variety	38
CHAPTER II    AFFINE ALGEBRAIC GROUPS	
1. Affine groups	41
2. Examples of affine groups	46
3. Actions	50
4. Quotients	55
5. Representations of affine groups	58
6. Quotients of affine groups by closed normal subgroups	66
CHAPTER III    AFFINE GROUPS AND LIE ALGEBRAS	
1. Some local algebra	79
2. Derivations and Lie algebras	85
3. The Lie algebra of an affine group	90
4. Dimension theory	95
5. Functorial properties of the Lie algebra	103
CHAPTER IV    REPRESENTATIONS OF LIE ALGEBRAS	
1. Complete reducibility	113
2. The theorems of Engel and Lie	116
3. Cartan's criterion	123
4. Semisimple Lie algebras	128
5. Weyl's theorem	135
6. Reductive Lie algebras	143
7. Counterexamples in characteristic $p$	147

## CHAPTER V INVARIANTS OF AFFINE GROUPS

1. Hilbert's fourteenth problem	151
2. The Reynolds operator	154
3. Mumford's theorem	159
4. Semisimple groups revisited	162
5. Solvable groups	171
6. Integral dependence and finiteness	180
7. Finite groups	186
8. Semi-reductive groups	188
9. The normalization of an affine variety	196
10. Weitzenbock's theorem	201
11. Fischer's theorem	205
Miscellaneous exercises	206
