

TABLE OF CONTENTS

CHAPTER I

PRINCIPLES AND DIRECT METHODS

	PAGE
Definitions (Arts. 1-4)	1
Invariants and covariants to be expected (5-7)	5
Jacobians, Hessians, eliminants, and discriminants (8-13, 15)	9
The modulus irresoluble (14)	17
A theorem on powers of the modulus proved and applied (16, 17)	18
Intermediate invariants and covariants (18-20)	23

CHAPTER II

ESSENTIAL QUALITIES OF INVARIANTS

Homogeneity (Arts. 21, 22)	27
The factor a power of the modulus (23, 24)	28
Isobarism (25-28)	31
Absolute invariants (29)	34
Number of independent invariants limited (30)	35
Invariants of more quantics than one (31-33)	37

CHAPTER III

ESSENTIAL QUALITIES OF COVARIANTS

Homogeneity (Arts. 34-36)	40
The factor a power of the modulus (37)	41
Isobarism (38-40)	42
Absolute covariants (41)	45
Number of independent covariants limited (42, 43)	46
Covariants of more quantics than one (44)	48
Invariants and covariants of covariants (45)	49

CHAPTER IV

COGREDIENT AND CONTRAGREDIENT QUANTITIES

	PAGE
Cogrediency of $\frac{\partial}{\partial y}$ and $-\frac{\partial}{\partial x}$ with x and y (Arts. 46-50)	51
Cogrediency defined (51)	55
Emanants (52, 53)	56
Geometry of binary systems (54, 55)	59
Covariants derived from emanants (56-58)	60
Symbolical representation: Hyperdeterminants: Transvectants (59-61)	64
Contragrediency (62-65)	74
Contravariants and mixed concomitants: Evectants (66, 67)	76
Covariants of a binary quantic as contravariants and as invariants (68, 69)	79

CHAPTER V

BINARY QUANTICS. INVARIANTS, ETC., AS FUNCTIONS OF
DIFFERENCES

Convention as to numerical multiples (Art. 71)	82
Covariancy of the factors of a binary quantic (72, 73)	83
Invariants as functions of differences (74-76)	86
Discriminants (77, 79)	89
Invariants of a quadratic, of a cubic, and of a quartic (78, 80, 81)	89, 92
Covariants as functions of differences (82, 83)	94
Covariants of a quadratic, and of a cubic (84-86)	97
Several binary quantics (87)	100
Theorems as to functions of differences (88, 89)	101

CHAPTER VI

BINARY QUANTICS CONTINUED. ANNIHILATORS. SEMINVARIANTS

The annihilators Ω and O of invariants (Arts. 90-94)	108
Symmetry of invariants: Skew invariants (95, 96)	112
Sufficiency of conditions of annihilation (97)	113
Differential operations which effect a linear transformation (98-100)	114
Formation of invariants by aid of Ω (101, 102)	118
Invariants of several binary quantics (103)	120
Annihilators of covariants (104-108)	122
A covariant is given by one of its coefficients (109, 110)	125
Seminvariants, and the covariants which they lead (111, 112, 115)	127
Determination of seminvariants (113, 114)	129
<hr/>	
Additional examples	134

CHAPTER VII

FURTHER THEORY OF THE OPERATORS Ω AND O . RECIPROCITY

	PAGE
Gradients, and the differential equations they satisfy (Arts. 116, 117)	138
Seminvariants and invariants as classes of gradients (118-120)	139
Repeated operations with Ω and O : Alternants (121-125)	141
There are no seminvariants of negative excess (126)	146
The exact number of given positive excess (127, 128)	147
Separation of gradients into seminvariant and other parts (128 <i>bis</i>)	150
Arithmetical conclusions: Reciprocity: Hermite's law (129-131)	153
Gradients in more sets than one (132)	157

CHAPTER VIII

GENERATING FUNCTIONS

Generating functions for numbers of partitions and of seminvariants (Arts. 133-137)	159
Irreducible concomitants of linear form, of quadratic, and of cubic (138-141)	164
Irreducible invariants of quartic, of quintic, and of sextic (142, 143)	169
Generating functions for concomitants of given degree and order (144)	171
Reduced and representative generating functions (145-147)	172
Real generating functions (148)	179

CHAPTER IX

HILBERT'S PROOFS OF GORDAN'S THEOREM

Lemmas on solutions of Diophantine equations (Art. 150)	182
Proof of Gordan's theorem for invariants of one binary quantic (151-154)	186
Proof for covariants of one binary quantic (155, 156)	192
Proof for several binary quantics (157)	193
Hilbert's second proof (157 <i>bis, ter</i>)	195
Syzygies and syzygants (157 <i>iv</i>)	198

CHAPTER X

PROTOMORPHS, ETC.

	PAGE
Recapitulation (Art. 158)	199
Substitution of derived quantics for arguments in seminvariants, &c. (159, 160)	200
A seminvariant is given by its non-unitary terms (161, 162)	202
Systems of protomorphs (163, 164, 167, 168)	204
The protomorphs of lowest degrees (165, 166)	207
Irreducible systems of concomitants: The cubic and quartic (169-171)	212
The seminvariants with given non-unitary terms (172, 173)	215
Non-unitary terms of invariants are determinate (174, 175)	217
Seminvariants as quantics in $a_p:1$. (176-179)	221
Operators which generate seminvariants (180-182)	224

CHAPTER XI

FURTHER THEORY OF SEMINVARIANTS. THE BINARY
QUANTIC OF INFINITE ORDER

Expressions for Ω , &c.: Roots and sums of their powers (Arts. 183-187)	229
Non-unitary symmetric functions (188)	236
Generating functions: Perpetuants: Reciprocity (189, 190)	238
Power ending products (191)	241
Annihilators of all gradients (192, 193)	242
Generators of all seminvariants (194, 194 <i>bis</i>)	243
—————	
Additional Examples (Miscellaneous)	247

CHAPTER XII

CANONICAL FORMS, ETC.

Principles and definitions (Arts. 195-198)	253
Canonical form of binary cubic (199-202)	255
Canonical forms of binary quantics of odd order (203-205)	260
Canonizants (206)	263
Apolarity (207)	266
Quantics of even order: Catalecticants (208-210)	267
Canonical form of binary quartic (211-220)	269
Solution of a quartic equation (221, 222)	280
Geometry of concomitants of quartic (223)	282
Binary sextics, octavics, and $2n$ -ics (224-228)	284
Canonical form of ternary cubic (229)	290
Catalecticants of ternary, quaternary, &c. quartics (230, 231)	293

CHAPTER XIII

INVARIANTS AND COVARIANTS OF THE BINARY QUINTIC AND SEXTIC

	PAGE
The twenty-three concomitants of a quintic (Arts. 232, 234, 235)	296
Hammond's canonical and semi-canonical forms (233, 235)	297
Discriminant of Quintic (236)	302
Syzygy among invariants of Quintic (237)	302
Hermite's Formes-types (238, 240)	304
Quintics which satisfy invariant conditions (239-243)	305
The twenty-six concomitants of a sextic (244, 245)	311
<hr/>	
Additional examples	314

CHAPTER XIV

SEVERAL BINARY QUANTICS

Concomitants of several binary quantics (Art. 247)	318
Linear form and p -ic (248, 249, 252)	319
All gradients lead pure or mixed concomitants (248 <i>bis</i>)	320
Cases of $p = 1$ and $p = 2$ (250, 251)	323
Irreducible system for linear form and cubic (253, 254)	325
Linear form and quartic (255)	328
Several linear forms (256)	329
System of two quadratics (257, 258)	330
Linear form and two quadratics (259)	334
Quadratic and cubic (260-262)	335
Seminvariants as invariants of systems (262 <i>bis</i>)	338
Quantics of orders descending by units (263)	339
Quantics of one order: Combinants (264, 265)	340

CHAPTER XV

RESTRICTED SUBSTITUTIONS. BINARY QUANTICS IN CARTESIAN GEOMETRY

The substitutions of Cartesian geometry (Art. 266)	343
Boolean and orthogonal invariants, &c. (267-269)	344
Orthogonal cogrediency and contragrediency identical (270)	346
Annihilators of absolute orthogonal, and Boolean, concomitants (271, 272)	349
Boolean complete systems for quantics of low orders (273)	352
All products lead absolute orthogonal covariants (274)	354
An annihilator of all forms (275)	355
Non-absolute orthogonal concomitants (276-278)	356
Orthogonal complete systems (278 <i>bis</i>)	361

CHAPTER XVI

TERNARY QUANTICS. THE QUADRATIC AND CUBIC

	PAGE
Triple arrangement of a ternary quantic (Art. 280)	364
The annihilators of invariants and covariants (281-283, 288, 289) .	365
The alternants of these annihilators (284-287)	368
The invariant of a ternary quadratic (290)	373
The invariants of a ternary cubic (291-295)	374
Covariants of ternary quantics (296-299)	382
Has a ternary quadratic covariants? (300)	390
Covariants of a ternary cubic (301-304)	391
Ternary covariant sources (304 <i>bis</i>)	396
Contravariants (305)	399
Contravariants of ternary quadratic and of ternary cubic (306-308)	400
Mixed concomitants (309, 310)	403
Quantics in more than three variables (311, 312)	406
