Introduction 1

Notation and Terminology 19

CHAPTER 1. The Role of Reductive Groups in Invariant Theory 23
§1. Reductive groups and the generalized Hilbert's 14th problem 23
§2. Quasihomogeneous varieties of reductive groups and the original Hilbert's 14th problem 25

CHAPTER 2. Constructive Invariant Theory 29
§1. Formulation and reduction of the problem 29
§2. A bound on the degree of a system of parameters and the main theorem 33
§3. The radical of the ideal I and the approach suggested by Dieudonné and Carrell 40

CHAPTER 3. The Degree of the Poincaré Series of the Algebra of Invariants and a Finiteness Theorem for Representations wit Free Algebra of Invariants 43
§1. The degree of the Poincaré series and a functional equation 43
§2. The zonohedron of weights 51
§3. Finiteness theorems 56

CHAPTER 4. Syzygies in Invariant Theory 61
§0. A description of the results and additional notation 61
§1. Monotonicity theorems 64
§2. Bounds on $\operatorname{hd} k[V]^G$ for certain types of groups 68
§3. Estimating $\operatorname{hd} k[V]^G$ with the aid of one-dimensional tori of G 76
§4. Majorizing theorems for multiplicities, generic stabilizers, and stability 82
§5. Torus T for the classical simple groups of rank ≥ 2 87
§6. Torus T for the exceptional simple groups 94
§7. Proof of the main theorem: the first case 100
§8. Proof of the main theorem: the second case 104

§9. Proof of the main theorem: the third case 113
§10. Examples 119

CHAPTER 5. Representations with Free Modules of Covariants 127
§1. Connections with equidimensionality: finiteness theorems 127
§2. Classification and equivalent characterizations: Igusa's condition 135

CHAPTER 6. A Classification of Normal Affine Quasihomogeneous Varieties of SL_2 147
§1. Some general results and the beginning of classification 147
§2. The conclusion of classification 154
§3. Application: the structure of orbit closures in finite-dimensional rational SL_2-modules 164

CHAPTER 7. Quasihomogeneous Curves, Surfaces, and Solids 167
§1. A classification of irreducible quasihomogeneous curves 167
§2. A classification of irreducible affine surfaces with algebraic groups of automorphisms acting transitively on the complement of a finite number of points 176
§3. A classification of irreducible affine solids with algebraic groups of automorphisms acting transitively on the complement of a finite number of points 181

Appendix 201
§1. Appendix to Chapter 1 201
§2. Appendix to Chapter 2 203
§3. Appendix to Chapter 3 204
§4. Appendix to Chapter 4 213
§5. Appendix to Chapter 5 216
§6. Appendix to Chapter 6 225
