| Introduction | xv |

Part I. Expository Articles

| | |
|---|----|
| SIR PETER SWINNERTON-DYER — <i>Diophantine equations: progress and problems</i> | 3 |
| 1. Introduction | 3 |
| 2. The Hasse Principle and the Brauer–Manin obstruction | 6 |
| 3. Zeta functions and L-series | 12 |
| 4. Curves | 15 |
| 5. Generalities about surfaces | 19 |
| 6. Rational surfaces | 20 |
| 7. K3 surfaces and Kummer surfaces | 27 |
| 8. Density of rational points | 28 |
| References | 32 |
| ROGER HEATH-BROWN — <i>Rational points and analytic number theory</i> .. | 37 |
| 1. Introduction | 37 |
| 2. Contributions from analytic number theory | 38 |
| 3. Potential applications to analytic number theory | 40 |
| References | 41 |
| DAVID HARARI — <i>Weak approximation on algebraic varieties</i> | 43 |
| 1. Introduction | 43 |
| 2. Classical results | 44 |
| 3. Cohomological methods | 50 |
| References | 57 |

| | |
|--|----|
| EMMANUEL PEYRE — <i>Counting points on varieties using universal torsors</i> | 61 |
| 1. Introduction | 61 |
| 2. Heights on projective varieties | 63 |
| 3. Manin's principle | 66 |
| 4. Results | 70 |
| 5. The counterexample of Batyrev and Tschinkel | 71 |
| 6. Methods of counting | 71 |
| 7. A basic example | 72 |
| 8. Universal torsors | 73 |
| 9. Toric varieties | 76 |
| 10. The plane blown up in 4 points | 78 |
| 11. Generalization | 79 |
| References | 80 |

Part II. Research Articles

| | |
|--|-----|
| VICTOR V. BATYREV & OLEG N. POPOV — <i>The Cox ring of a Del Pezzo surface</i> | 85 |
| 1. Introduction | 85 |
| 2. Del Pezzo surfaces | 89 |
| 3. Generators of $\text{Cox}(X_r)$ | 92 |
| 4. Quadratic relations in $\text{Cox}(X_r)$ | 97 |
| References | 102 |

| | |
|--|-----|
| NIKLAS BROBERG & PER SALBERGER — <i>Counting rational points on threefolds</i> | 105 |
| 1. Introduction | 105 |
| 2. Preliminaries | 106 |
| 3. Proof of the main theorem | 112 |
| References | 119 |

| | |
|--|-----|
| JEAN-LOUIS COLLIOT-THÉLÈNE & PHILIPPE GILLE — <i>Remarques sur l'approximation faible sur un corps de fonctions d'une variable</i> | 121 |
| 1. Introduction | 121 |
| 2. Rappels : Approximation faible | 122 |
| 3. Rappels : Cohomologie galoisienne des corps C_1 | 123 |
| 4. Approximation faible pour les espaces homogènes de groupes linéaires connexes et pour les variétés qui s'y ramènent | 124 |

| | |
|---|-----|
| 5. Une surface d'Enriques qui ne satisfait pas à l'approximation faible | 130 |
| Références | 133 |
| | |
| JORDAN S. ELLENBERG — <i>K3 surfaces over number fields with geometric Picard number one</i> | 135 |
| 1. Introduction | 135 |
| 2. Proofs | 136 |
| References | 140 |
| | |
| TOM GRABER, JOSEPH HARRIS, BARRY MAZUR & JASON STARR — <i>Jumps in Mordell–Weil rank and Arithmetic Surjectivity</i> | 141 |
| 1. Arithmetic surjectivity | 142 |
| 2. Quadratic twist families | 144 |
| 3. The Cassels–Schinzel example | 146 |
| References | 147 |
| | |
| BRENDAN HASSETT & YURI TSCHINKEL — <i>Universal torsors and Cox rings</i> | 149 |
| 1. Introduction | 149 |
| 2. Generalities on the Cox ring | 151 |
| 3. Generalities on toric varieties | 155 |
| 4. The E_6 cubic surface | 158 |
| 5. D_4 cubic surface | 169 |
| References | 172 |
| | |
| BJORN POONEN & JOSÉ FELIPE VOLOCH — <i>Random diophantine equations</i> | 175 |
| 1. Introduction | 176 |
| 2. A conjecture | 176 |
| 3. Motivation and evidence | 177 |
| 4. Generalization to number fields | 179 |
| Appendix A. The Brauer–Manin obstruction for complete intersections of dimension ≥ 3 (by Jean-Louis Colliot-Thélène) | 180 |
| Appendix B. Applications of the Weak Lefschetz Theorem (by Nicholas M. Katz) | 182 |
| References | 183 |
| | |
| WAYNE RASKIND & VICTOR SCHARASCHKIN — <i>Descent on simply connected surfaces over algebraic number fields</i> | 185 |

| | |
|---|-----|
| 1. Introduction | 185 |
| 2. Notation and preliminaries | 187 |
| 3. Rapid review of the theory of Colliot-Thélène–Sansuc | 188 |
| 4. The homological algebra of descent | 190 |
| 5. The elementary obstruction | 191 |
| 6. The Tate conjecture and the Brauer group | 194 |
| 7. Universal gerbes and the higher Abel–Jacobi mapping | 196 |
| 8. Geometric interpretation of the Brauer–Manin obstruction | 197 |
| 9. Descent on curves | 200 |
| 10. Concluding remarks | 200 |
| Appendix A. Stacks and gerbes | 201 |
| Appendix B. Description of the Brauer group in terms of gerbes | 202 |
| References | 202 |
| JOSEPH SHALIKA, RAMIN TAKLOO-BIGHASH & YURI TSCHINKEL — <i>Rational points on compactifications of semi-simple groups of rank 1</i> | |
| 1. Introduction | 205 |
| 2. Basic definitions and results | 207 |
| 3. Heights and height integrals | 210 |
| 4. Eisenstein series | 212 |
| 5. Eisenstein integrals | 215 |
| 6. P-series | 218 |
| 7. The cuspidal spectrum | 224 |
| 8. Appendix | 227 |
| References | 232 |
| SIR PETER SWINNERTON-DYER — <i>Weak Approximation on Del Pezzo surfaces of degree 4</i> | |
| 1. Introduction | 235 |
| 2. The Legendre–Jacobi functions | 237 |
| 3. Salberger’s device | 246 |
| 4. Reduction to a pencil of conics | 250 |
| 5. Proof of Theorem 2 | 253 |
| References | 257 |
| OLIVIER WITTENBERG — <i>Transcendental Brauer–Manin obstruction on a pencil of elliptic curves</i> | |
| 1. Introduction | 259 |
| 2. Preliminaries: 2-descent and the Brauer group of an elliptic curve .. | 260 |
| 3. An actual example | 263 |

| | |
