INTRODUCTION

Introduction (1944) vii
Advice to the reader xiii
Table of notations xvii

CHAPTER I. ALGEBRAIC PRELIMINARIES

§1. Notations 1
§2. Dimension; independence; linear disjointness 2
§3. Ideal determined by a set of quantities over a field 6
§4. Separability; sets of conjugates 8
§5. Derivations 11
§6. Extending the field of reference 14
§7. Regular extensions 16
§8. The order of inseparability 21

CHAPTER II. ALGEBRAIC THEORY OF SPECIALIZATIONS

§1. Specializations 26
§2. Extension of specializations 30
§3. Applications 32
§4. Specialization-rings 36
§5. Finiteness over a specialization 41
§6. Generalizations 43

CHAPTER III. ANALYTIC THEORY OF SPECIALIZATIONS

§1. Ideals in arbitrary rings 45
§2. Ideals in polynomial rings 48
§3. Rings of power-series 50
§4. The multiplicity of a specialization 61

CHAPTER IV. THE GEOMETRIC LANGUAGE

§1. Points and varieties 68
§2. Isomorphisms; conjugate varieties; specialization-rings 75
§3. Product-varieties and projections 78
§4. Unions and intersections of varieties 84
§5. Linear varieties 90
§6. Simple points 97
§7. Projection from a variety and birational correspondences 105

CHAPTER V. INTERSECTION-MULTIPLICITIES (SPECIAL CASE)

§1. Intersections of dimension 0 116
§2. Intersections of arbitrary dimension 129
§3. The theory of simple points 135

CHAPTER VI. GENERAL INTERSECTION-THEORY

§1. Definition of the symbol $i(A \cdot B, C; U)$ 142
§2. Properties of the symbol $i(A \cdot B, C; U)$ 149
§3. Intersections in product-varieties 153

PAGE

CHAPTER VII. THE GEOMETRY ON ABSTRACT VARIETIES
§1. The Zariski topology ... 166
§2. Mappings and morphisms ... 170
§3. Abstract varieties ... 179
§4. The topology of abstract varieties ... 185
§5. Products and projections ... 189
§6. Mappings of abstract varieties ... 195
§7. Intersection-multiplicities ... 200

CHAPTER VIII. THE CALCULUS OF CYCLES
§1. Chains and cycles ... 206
§2. Chains and cycles of dimension 0 ... 213
§3. Fundamental operations on chains and cycles ... 219
§4. Images and counterimages of cycles ... 231

CHAPTER IX. DIVISORS AND LINEAR SYSTEMS
§1. Mappings into curves ... 243
§2. Divisors of functions ... 245
§3. Some auxiliary results ... 255
§4. Qualitative theory of divisors ... 261
§5. Linear systems and projective spaces ... 269
§6. The generic divisors of a linear system ... 293

CHAPTER X. COMMENTS AND DISCUSSIONS
§1. Qualitative and quantitative algebraic geometry ... 304
§2. The universal domain ... 305
§3. The concept of affine variety ... 308
§4. Derivations and differential forms ... 309
§5. Specializations ... 311
§6. The theory of intersections ... 316
§7. Abstract varieties and their generalizations ... 320
§8. Comments on Chapter IX ... 325
§9. Equivalence theories and open questions ... 328

APPENDIX I. NORMAL VARIETIES AND NORMALIZATION ... 334
APPENDIX II. CHARACTERIZATION OF THE i-SYMBOL BY ITS PROPERTIES ... 349
APPENDIX III. VARIETIES OVER TOPOLOGICAL FIELDS ... 352

INDEX OF DEFINITIONS ... 359
