INTRODUCTION	v
PREREQUISITES AND REFERENCES	x
COMPLEMENTARY LITERATURE	xi
GENERAL CONVENTIONS	xiii
<u>CHAPTER I</u> <u>INTRODUCTION TO ALGEBRAIC GEOMETRY</u>	1
§ 1 THE LANGUAGE	1
1 Geometric spaces	1
2 The prime spectrum of a ring	4
3 \mathbb{Z} -functors	11
4 The geometric realization of a \mathbb{Z} -functor	19
5 Fibred products of schemes	28
6 Relativization	32
§ 2 QUASI-COHERENT MODULES; APPLICATIONS	42
1 Sheaves of modules over a geometric space	42
2 Direct and inverse images of quasi-coherent sheaves	48
3 Faithfully flat quasicompact morphisms	53
4 The functorial point of view	58
5 Affine morphisms	63
6 Closed embeddings	67
7 Embeddings	77
8 An affineness criterion for schemes	80
9 Transporters	82
§ 3 ALGEBRAIC SCHEMES	85
1 Finitely presented morphisms	85
2 Algebraic schemes	90
3 Constructible subsets of an algebraic scheme. Flat morphisms	95
4 Monomorphisms of algebraic schemes	105
5 The Krull dimension of a noetherian ring	110

6	Algebraic schemes over a field	116
§ 4	SMOOTH MORPHISMS	122
1	The module of an embedding	122
2	The module of differentials	126
3	Clean morphisms	132
4	Smooth morphisms	135
5	Proof of the smoothness theorem	144
6	Etale schemes over a field	153
§ 5	PROPER MORPHISMS	159
1	Integral morphisms	159
2	The valuation criterion for properness	162
3	Algebraic curves	168
<u>CHAPTER II ALGEBRAIC GROUPS</u>		173
§ 1	GROUP SCHEMES	173
1	Group-functors and group schemes: definitions	173
2	Examples of group schemes	182
3	Action of a k -group on a k -scheme	198
§ 2	LINEAR REPRESENTATIONS	208
1	Definitions	208
2	Linear representation of affine groups	212
3	Existence of linear representations (in the case of a base field)	222
§ 3	HOCHSCHILD COHOMOLOGY FOR GROUP SCHEMES	226
1	The Hochschild complex and the exact cohomology sequence	226
2	Extensions and cohomology of degree 2	230
3	Cohomology of a linear representation	233
4	Calculation of various cohomology groups	238
§ 4	DIFFERENTIAL CALCULUS ON GROUP SCHEMES	244
1	Infinitesimal points of a group-functor	244
2	Examples	246
3	Infinitesimal points of a group scheme	250
4	The Lie algebra of a group-scheme	254

5	Differential operators	262
6	Invariant differential operators on a group scheme	269
7	Infinitesimal groups	278
§ 5	LOCALLY ALGEBRAIC GROUPS OVER A FIELD	282
1	The neutral component, etale groups	282
2	Smooth groups	287
3	Orbits	291
4	The group of rational points over an algebraically closed field	293
5	Homomorphisms of algebraic groups	299
§ 6	THE CHARACTERISTIC 0 CASE	305
1	The enveloping algebra and invariant differential operators	305
2	Relationships between groups and Lie algebras	309
3	The exponential map	315
§ 7	THE CHARACTERISTIC $p \neq 0$ CASE	321
1	The Frobenius morphism	321
2	The p^{th} -power operation in $\text{Lie}(G)$	324
3	Lie p -algebras	326
4	Groups of height ≤ 1 over a field	334
	FUNCTORIAL DICTIONARY	337
	INDEX OF NOTATIONS	344
	TERMINOLOGICAL INDEX	351
