CHAPTER I

Elementary Theory in \mathbf{C}^n

1. Notation and Terminology	1
2. Convergent Power Series	6
A. Domain of convergence	6
B. The translation operator τ_a	9
C. Derivatives	11
3. Laurent Series	17
4. Cauchy Theory	23
5. Convexity in \mathbf{R}^n	35
A. Convex and hyperplane convex	37
B. Comparison of various convex hulls in \mathbf{R}^n	42
C. Monomial convex and logarithmically convex. Convex and holomorphically convex	43
6. Laurent Expansion in \mathbf{C}^n	48
7. Domains of Holomorphy	55
8. A Theorem of Radó	59
9. Comments on Totally Disconnected Fields	65

CHAPTER II

Weierstrass Preparation Theorem

10. Weierstrass Preparation Theorem. Identity Theorem. Finite Ideal Bases and Unique Factorization in Power Series Rings. Implicit Function Theorem	71
11. Continuity of Roots and Open Map Theorem	90
12. Hensel's Lemma. Continuity of Algebraic Functions	93
A. Hensel's lemma	93
B. Algebraic functions—Continuity of roots	95
C. Algebraic polycylinders—Continuity of roots	96
13. Complex Weierstrass Preparation Theorem	100
14. Riemann Extension Theorem and Connectivity of Algebraic Hypersurfaces	107
A. Riemann extension theorem	107
B. Review on connectedness	109
C. Connectivity of algebraic hypersurfaces	113

15. Oka Coherence	117
16. Cartan Module Bases	125

CHAPTER III

Review from Local Algebra

17. Depth, Height, and Dimension. Completions. Direct Sums. Resultants and Discriminants	141
18. Quotient Rings	149
19. Integral Dependence and Finite Generation	158
20. Henselian Rings	173
21. Order and Rank in Local Rings. Regular Local Rings	178
22. Another Proof that a Formal Power Series Rings is Noetherian	184

CHAPTER IV

Parameters in Power Series Rings

23. Parameters for Ideals	189
24. Perfect Fields	198
25. Regularity of Quotient Rings	204
26. Translates of Ideals	211
27. Dimension of an Intersection	215
28. Algebraic Lemmas on Algebroid Functions	223

CHAPTER V

Analytic Sets

29. The Language of Germs	230
30. Decomposition of an Analytic Set Germ	233
31. Rückert–Weierstrass Parametrization of an Irreducible Analytic Set Germ	246
32. Rückert–Weierstrass Parametrization of an Irreducible Analytic Set Germ (Summary)	264
33. Local Properties of Analytic Sets	271
A. General properties	271
B. The singular locus	278
C. Cartan coherence and analyticity of the singular locus	283
D. Projections	285
34. Connectivity Properties of Complex Analytic Sets	289
A. Local connectivity	289
B. Global decomposition	293
C. Maximum principle	299
D. Consequences of the maximum principle	300

35. Parametrization of a Pure Dimensional Analytic Set	305
A. Local parametrization	305
B. Global parametrization	312
36. Normal Points of Complex Analytic Sets. Remarks on Algebraic Varieties	323
37. Remmert–Stein–Thullen Theorem on Essential Singularities of Complex Analytic Sets. Theorem of Chow	333
38. Topological Dimension	346
39. Remarks on the Fundamental Group	349

CHAPTER VI

Language of Sheaves

40. Inductive Systems and Presheaves	357
41. Sheaves	369
42. Coherent Sheaves	384

CHAPTER VII

Analytic Spaces

43. Definitions	394
44. Recapitulation of Properties of Analytic Spaces	402
A. Local properties	402
B. Coherence of the structure sheaf and definition of meromorphic functions	409
C. Connectivity properties of complex spaces	414
45. Invariance of Order and Rank	424
46. Bimeromorphic Maps and Normalizations	442
