

TABLE OF CONTENTS

INTRODUCTION	xi
Chapter 1: GENERALITIES ON "A-STRUCTURES" AND "A-GENERATORS"	3
1.1 <i>Review of relative Cartier divisors</i>	3
1.2 <i>Relative Cartier divisors in curves</i>	7
1.3 <i>Existence of incidence schemes</i>	12
1.4 <i>Points of "exact order N" and cyclic subgroups</i>	17
1.5 <i>A mild generalization: A-structures and A-generators</i>	20
1.6 <i>General representability theorems for A-structures and A-generators</i>	22
1.7 <i>Factorization into prime powers of A-structures and A-generators</i>	26
1.8 <i>Full sets of sections</i>	32
1.9 <i>Intrinsic A-structures and A-generators</i>	38
1.10 <i>Relation to Cartier divisors</i>	40
1.11 <i>Extensions of an étale group</i>	48
1.12 <i>Roots of unity</i>	55
1.13 <i>Some open problems</i>	61
Chapter 2: REVIEW OF ELLIPTIC CURVES	63
2.1 <i>The group structure</i>	63
2.2 <i>Generalized Weierstrass equations, and some elementary universal families</i>	67
2.3 <i>The structure of $[N]$</i>	73
2.4 <i>Rigidity</i>	75
2.5 <i>Manifestations of autoduality</i>	77
2.6 <i>Hasse's theory</i>	81
2.7 <i>Applications to rigidity</i>	85
2.8 <i>Pairings</i>	87
2.9 <i>Deformation theory</i>	91
Chapter 3: THE FOUR BASIC MODULI PROBLEMS FOR ELLIPTIC CURVES: SORITES	98
3.1 $\Gamma(N)$ -structures	98
3.2 $\Gamma_1(N)$ -structures	99
3.3 <i>Balanced $\Gamma_1(N)$-structures</i>	100
3.4 $\Gamma_0(N)$ -structures	100
3.5 <i>Factorization into prime powers</i>	101
3.6 <i>Relative representability</i>	102
3.7 <i>The situation when N is invertible</i>	104

Chapter 4: THE FORMALISM OF MODULI PROBLEMS	107
4.1 <i>The category (Ell)</i>	107
4.2 <i>Moduli problems</i>	107
4.3 <i>Representable moduli problems</i>	108
4.4 <i>Rigid moduli problems</i>	109
4.5 <i>Geometric properties of moduli problems</i>	109
4.6 <i>Some examples</i>	110
4.7 <i>A basic result: representability and rigidity</i>	111
4.8 <i>Another example</i>	117
4.9 <i>Yet another example</i>	117
4.10 <i>Lemmas on group-schemes</i>	118
4.11 <i>Modular families</i>	120
4.12 <i>More geometric properties of moduli problems</i>	121
4.13 <i>The category (Ell/R)</i>	122
4.14 <i>Moduli problems of finite level</i>	123
APPENDIX: MORE ON RIGIDITY AND REPRESENTABILITY	125
Chapter 5: <i>Regularity theorems</i>	129
5.1 <i>First main theorem</i>	129
5.2 <i>Axiomatics</i>	129
5.3 <i>End of the proof</i>	135
5.4 <i>Summary of parameters at supersingular points</i>	143
5.5 <i>First applications</i>	143
5.6 <i>Pairings</i>	150
Chapter 6: CYCLICITY	152
6.1 <i>The main theorem</i>	152
6.2 <i>Axiomatics</i>	155
6.3 <i>End of the proof</i>	156
6.4 <i>Cyclicity as a closed condition</i>	162
6.5 <i>The moduli problem [N-Isog]</i>	164
6.6 <i>The moduli problem $[\Gamma_0(N)]$: proof of the First Main Theorem</i>	166
6.7 <i>Detailed theory of cyclic isogenies and cyclic subgroups; standard factorizations</i>	167
6.8 <i>More on [N-Isog]</i>	178
Chapter 7: QUOTIENTS BY FINITE GROUPS	186
7.1 <i>The general situation</i>	186
7.2 <i>A descent situation</i>	195
7.3 <i>Quotients of product problems</i>	196
7.4 <i>Applications to the four basic moduli problems</i>	197
7.5 <i>Axiomatics</i>	201
7.6 <i>Applications to regularity</i>	207
7.7 <i>Summary of parameters at supersingular points</i>	208
7.8 <i>More parameters for $[\Gamma_0(p^n)]$ at supersingular points</i>	208
7.9 <i>Detailed study of the congruence quotients $[\Gamma_0(p^n); a, b]$ of $[ba, \Gamma_1(p^n)]$</i>	210
APPENDIX: BASE CHANGE FOR RINGS OF INVARIANTS	215

Chapter 8:	COARSE MODULI SCHEMES, CUSPS, AND COMPACTIFICATIONS	224
8.1	<i>Coarse moduli schemes</i>	224
8.2	<i>The j-line as a coarse moduli scheme</i>	228
8.3	<i>Localization of moduli problems over the j-line</i>	232
8.4	<i>The j-invariant as a fine modulus, coarse moduli schemes as fine moduli schemes(!)</i>	234
8.5	<i>Base change for coarse moduli schemes</i>	243
8.6	<i>Cusps by normalization near infinity; compactified coarse moduli schemes</i>	246
8.7	<i>Interlude: The groups $T[N]$ and T</i>	251
8.8	<i>Relation to the Tate curve</i>	258
8.9	<i>Relation with ordinary elliptic curves via the Serre-Tate parameter</i>	260
8.10	<i>Other universality properties of the groups $T[N]$</i>	261
8.11	<i>Computation of Cusps(\mathcal{P}) via the Tate curve</i>	266
Chapter 9:	MODULI PROBLEMS VIEWED OVER CYCLOTOMIC INTEGER RINGS	271
9.1	<i>Generalities</i>	271
9.2	<i>A descent situation</i>	277
9.3	<i>The situation near infinity</i>	278
9.4	<i>Applications to the basic moduli problems</i>	281
Chapter 10:	THE CALCULUS OF CUSPS AND COMPONENTS VIA THE GROUPS $T[N]$ AND THE GLOBAL STRUCTURE OF THE BASIC MODULI PROBLEMS	286
10.1	<i>Motivation</i>	286
10.2	<i>Analysis of $[\Gamma(N)]$</i>	287
10.3	<i>Group action</i>	290
10.4	<i>Canonical problems</i>	293
10.5	<i>Explication for $T[N]$</i>	295
10.6	<i>Cusp-labels and component-labels</i>	295
10.7	<i>Some combinatorial lemmas</i>	296
10.8	<i>Application to structure near infinity</i>	299
10.9	<i>Applications to the four basic moduli problems</i>	301
10.10	<i>Detailed analysis at a prime p, balanced subgroups</i>	309
10.11	<i>Basic examples of balanced subgroups</i>	324
10.12	<i>Application to the moduli problem $[\Gamma_0(P^n); a, a]$</i>	326
10.13	<i>The numerology of moduli schemes, via the line bundle ω</i>	328
Chapter 11:	INTERLUDE: EXOTIC MODULAR MORPHISMS AND ISOMORPHISMS	339
11.1	<i>Motivation</i>	339
11.2	<i>"Abstract" morphisms</i>	339
11.3	<i>Some basic examples</i>	340
Chapter 12:	NEW MODULI PROBLEMS IN CHARACTERISTIC p ; IGUSA CURVES	344
12.1	<i>Frobenius</i>	344

12.2:	<i>Basic lemmas</i>	345
12.3	<i>Igusa structures</i>	349
12.4	<i>The Hasse invariant</i>	353
12.5	<i>Ordinary curves</i>	359
12.6	<i>First analysis of the Igusa curve</i>	361
12.7	<i>Analysis of cusps</i>	366
12.8	<i>The equation defining $Ig(p)$, and a theorem of Serre</i>	368
12.9	<i>Numerology of Igusa curves</i>	376
12.10	<i>“Exotic” projections from Igusa curves; “exotic” Igusa structures</i>	381
Chapter 13:	REDUCTIONS mod p OF THE BASIC MODULI PROBLEMS	389
13.1	<i>Some general considerations on crossings at supersingular points</i>	389
13.2	<i>Modular schemes as examples</i>	396
13.3	<i>Analysis of p-power isogenies between elliptic curves</i>	399
13.4	<i>Global structure of the moduli spaces $\mathfrak{M}(\mathcal{P}, [\Gamma_0(p^n)]), \mathfrak{M}(\mathcal{P}, [p^n\text{-Isog}])$</i>	407
13.5	<i>Analysis of $[\Gamma_1(p^n)]$ in characteristic p</i>	414
13.6	<i>Explicit calculations via the groups $T[p^n]$ of $[\Gamma_0(p^n)], [\Gamma_1(p^n)]$</i>	418
13.7	<i>The reduction mod p of $[\Gamma(p^n)]^{\text{can}}$</i>	424
13.8	<i>Complete local ring of $[\Gamma(p^n)]^{\text{can}}$ at supersingular points; intersection numbers</i>	429
13.9	<i>Distribution of the cusps on $[\Gamma(p^n)]^{\text{can}}$</i>	433
13.10	<i>The reduction mod p of a general p-power level moduli problem</i>	435
13.11	<i>The reduction mod p of $[\text{bal. } \Gamma_1(p^n)]^{\text{can}}$</i>	441
13.12	<i>The reduction mod p of quotients of $[\text{bal. } \Gamma_1(p^n)]$ by subgroups of $(\mathbb{Z}/p^n\mathbb{Z})^\times \times (\mathbb{Z}/p^n\mathbb{Z})^\times$</i>	450
Chapter 14:	APPLICATION TO THEOREMS OF GOOD REDUCTION	457
14.1	<i>General review of vanishing cycles</i>	457
14.2	<i>Application to curves</i>	467
14.3	<i>Application to modular curves: explicitation of the numerical criterion</i>	471
14.4	<i>Characters and conductors</i>	479
14.5	<i>The Good Reduction Theorem</i>	480
14.6	<i>Explicitation of the Good Reduction Theorem</i>	500
14.7	<i>Application to Jacobians</i>	502
