Preface .................................................................................................................. v

Part 0. A Theorem of Polynomial Algebra ...................................................... 1

§1.1 Introduction. §1.2 Natural Rings. §1.3 On Existence. §1.4 Preliminaries. §1.5 The Basic Theory. §1.6 Definitions. §1.7 What is a Divisor? §1.8 §1.9 §1.10 First Propositions. §1.11 The Main Proposition. §1.12 Concluding Corollaries. §1.13 Testing for Divisibility. §1.14 The Group of Nonzero Divisors. §1.15 Greatest Common Divisors. §1.16 Ambient Fields. §1.17 Norms. §1.18 Factorization of Divisors. §1.19 §1.20 Two Basic Theorems. §1.21 The Divisor Class Group. §1.22 Prime Factorization and Normal Extensions. §1.23 §1.24 Rings of Values. §1.25 Primitive Elements, Norms, and Traces. §1.26 §1.27 §1.28 Differents. §1.29 §1.30 Discriminants. §1.31 §1.32 Ramification.

Part 2. Applications to Algebraic Number Theory ................. 60

§2.1 Factorization into Primes. §2.2 §2.3 §2.4 A Factorization Method. §2.5 Examples. §2.6 Integral Bases. §2.7 Proof of the Theorem of §2.4. §2.8 Dedekind’s Discriminant Theorem. §2.9 Differents and Discriminants. §2.10 §2.11 Cyclotomic Fields. §2.12 Quadratic Reciprocity.

Part 3. Applications to the Theory of Algebraic Curves ........ 85

§3.1 Function Fields. §3.2 §3.3 Parameters and Constants. §3.4 §3.5 §3.6 §3.7 §3.8 §3.9 §3.10 Global Divisors. §3.11 Numerical Extensions. §3.12 §3.13 §3.14 The Idea of a Place. §3.15 §3.16 Local Parameters at a Place. §3.17 Relative norms. §3.18 §3.19 A Divisor is a Product of Powers of Places. §3.20 Presentation of Places. §3.21 Degree of a Divisor. §3.22 A Characteristic of Places. §3.23 Dimension of a Divisor. §3.24
The Genus of a Function Field. §3.25 Abel's Theorem. §3.26
The Genus as a Limit. §3.27 A Converse of Abel's Theorem.
§3.28 The Divisor Class Group. §3.29 Examples.

Appendix .................................................................................. 137
§A.1 Introduction. §A.2 Definitions and First Propositions.
§A.3 Orders and Residues of Differentials. §A.4 The Sum of
the Residues is Zero. §A.5 Holomorphic Differentials. §A.6
Integral Bases. §A.7 Normal Bases. §A.8 §A.9 The Dual of
a Normal Basis. §A.10 Construction of Holomorphic Differ-
entials. §A.11 Examples. §A.12 The Riemann-Roch Theorem
for Integral Divisors. §A.13 Riemann-Roch for Reciprocals of
Integral Divisors. §A.14 General Case of the Riemann-Roch
Theorem.
