

Table of Contents

Preface	v
0. Introduction	1
1. Scalar Linear Systems over the Complex Numbers	5
2. Scalar Linear Systems over a Field k	9
3. Factoring Polynomials	15
4. Affine Algebraic Geometry: Algebraic Sets	20
5. Affine Algebraic Geometry: The Hilbert Theorems	24
6. Affine Algebraic Geometry: Irreducibility	29
7. Affine Algebraic Geometry: Regular Functions and Morphisms I	32
8. The Laurent Isomorphism Theorem	39
9. Affine Algebraic Geometry: Regular Functions and Morphisms II	45
10. The State Space: Realizations	50
11. The State Space: Controllability, Observability, Equivalence	58
12. Affine Algebraic Geometry: Products, Graphs and Projections	65
13. Group Actions, Equivalence and Invariants	71
14. The Geometric Quotient Theorem: Introduction	76
15. The Geometric Quotient Theorem: Closed Orbits	83
16. Affine Algebraic Geometry: Dimension	87
17. The Geometric Quotient Theorem: Open on Invariant Sets	103
18. Affine Algebraic Geometry: Fibers of Morphisms	105
19. The Geometric Quotient Theorem: The Ring of Invariants	113
20. Affine Algebraic Geometry: Simple Points	128
21. Feedback and the Pole Placement Theorem	137
22. Affine Algebraic Geometry: Varieties	145
23. Interlude	151
Appendix A: Tensor Products	168
Appendix B: Actions of Reductive Groups	175
Appendix C: Symmetric Functions and Symmetric Group Actions	179
Appendix D: Derivations and Separability	185
Problems	190
References	200
