Contents

0	Introduction	1
1	Curves of genus 0. Introduction	3
2	p-adic numbers	6
3	The local-global principle for conics	13
4	Geometry of numbers	17
5	Local-global principle. Conclusion of proof	20
6	Cubic curves	23
7	Non-singular cubics. The group law	27
8	Elliptic curves. Canonical form	32
9	Degenerate laws	39
10	Reduction	42
11	The p-adic case	46
12	Global torsion	50
13	Finite basis theorem. Strategy and comments	54
14	A 2-isogeny	58
15	The weak finite basis theory	66
16	Remedial mathematics. Resultants	75
17	Heights. Finite basis Theorem	78
18	Local-global for genus 1	85
19	Elements of Galois cohomology	89
20	Construction of the jacobian	92
21	Some abstract nonsense	98
22	Principal homogeneous spaces and Galois cohomology	104

23	The Tate-Shafarevich group	108
24	The endomorphism group	114
25	Points over finite fields	118
26	Factorizing using elliptic curves	124
	Formulary	130
	Further Reading	135
