

Table of Contents

Preface	vii
Chapter 1 Geometry, Algebra, and Algorithms	1
§1. Polynomials and Affine Space	1
§2. Affine Varieties	5
§3. Parametrizations of Affine Varieties	14
§4. Ideals	29
§5. Polynomials of One Variable	37
Chapter 2 Groebner Bases	48
§1. Introduction	48
Problems	48
§2. Orderings on the Monomials in $k[x_1, \dots, x_n]$	53
§3. A Division Algorithm in $k[x_1, \dots, x_n]$	60
§4. Monomial Ideals and Dickson's Lemma	68
§5. The Hilbert Basis Theorem and Groebner Bases	74
§6. Properties of Groebner Bases	80
§7. Buchberger's Algorithm	87
§8. First Applications of Groebner Bases	94
The Ideal Membership Problem	94
The Problem of Solving Polynomial Equations	95
The Implicitization Problem	97
§9. (Optional) Improvements on Buchberger's Algorithm	101
Chapter 3 Elimination Theory	113
§1. The Elimination and Extension Theorems	113
§2. The Geometry of Elimination	121
§3. Implicitization	126
§4. Singular Points and Envelopes	135
Singular Points	135
Envelopes	139
§5. Unique Factorization and Resultants	147
Irreducible Polynomials and Unique Factorization	147
Resultants	150
§6. Resultants and the Extension Theorem	159

Chapter 4 The Algebra–Geometry Dictionary	168
§1. Hilbert’s Nullstellensatz	168
§2. Radical Ideals and the Ideal–Variety Correspondence	174
§3. Sums, Products, and Intersections of Ideals	181
Sums of Ideals	182
Products of Ideals	183
Intersections of Ideals	184
§4. Zariski Closure and Quotients of Ideals	191
§5. Irreducible Varieties and Prime Ideals	196
§6. Decomposition of a Variety into Irreducibles	201
§7. (Optional) Primary Decomposition of Ideals	207
§8. Summary	211
Chapter 5 Polynomial and Rational Functions on a Variety	213
§1. Polynomial Mappings	213
§2. Quotients of Polynomial Rings	220
§3. Algorithmic Computations in $k[x_1, \dots, x_n]/I$	228
§4. The Coordinate Ring of an Affine Variety	235
§5. Rational Functions on a Variety	245
Chapter 6 Robotics and Automatic Geometric Theorem Proving	255
§1. Geometric Description of Robots	255
§2. The Forward Kinematic Problem	261
§3. The Inverse Kinematic Problem and Motion Planning	269
§4. Automatic Geometric Theorem Proving	280
§5. Wu’s Method	296
Step 1. Reduction to Triangular Form	299
Step 2. Successive Pseudodivision	301
Chapter 7 Invariant Theory of Finite Groups	306
§1. Symmetric Polynomials	306
§2. Finite Matrix Groups and Rings of Invariants	316
§3. Generators for the Ring of Invariants	325
§4. Relations among Generators and the Geometry of Orbits	333
Chapter 8 Projective Algebraic Geometry	345
§1. The Projective Plane	345
§2. Projective Space and Projective Varieties	356
§3. The Projective Algebra–Geometry Dictionary	366
§4. The Projective Closure of an Affine Variety	374
§5. Projective Elimination Theory	381
§6. The Geometry of Quadric Hypersurfaces	395

Chapter 9 The Dimension of a Variety	409
§1. The Variety of a Monomial Ideal	409
§2. The Complement of a Monomial Ideal	413
§3. The Hilbert Function and the Dimension of a Variety	426
The Dimension of an Affine Variety	427
The Dimension of a Projective Variety	432
§4. Elementary Properties of Dimension	438
§5. Dimension and Algebraic Independence	447
§6. Dimension and Nonsingularity	454
§7. The Tangent Cone	465
Appendix A Some Concepts from Algebra	479
§1. Fields and Rings	479
§2. Groups	480
§3. Determinants	481
Appendix B Pseudocode	483
§1. Inputs, Outputs, Variables, and Constants	483
§2. Assignment Statements	484
§3. Looping Structures	484
§4. Branching Structures	485
Appendix C Computer Algebra Systems	487
§1. Maple	487
§2. Mathematica	489
§3. REDUCE	491
§4. Other Systems	493
Appendix D Independent Projects	495
§1. General Comments	495
§2. Suggested Projects	495
References	499
Index	503
