Introduction	vii
Leitfaden	xvii
General notations and conventions	xviii

## Part One

1. Real spectrum and real étale site	1
2. Glueing étale and real étale site	9
3. Limit theorems, stalks, and other basic facts	18
4. Some reminders on Weil restrictions	30
5. Real spectrum of $X$ and étale site of $X[\sqrt{-1}]$	42
6. The fundamental long exact sequence	56
7. Cohomological dimension of $X_b$ , I: Reduction to the field case	68
8. Equivariant sheaves for actions of topological groups	87
9. Cohomological dimension of $X_b$ , II: The field case	96

## Part Two

10. $G$ -toposes	107
11. Inverse limits of $G$ -toposes: Two examples	128
11.1 Example 1: The real topos of a scheme	128
11.2 Example 2: Group extensions	133
12. High degree cohomology of profinite groups	143
13. Group actions on spaces: Topological versus topos-theoretic constructions	161
14. Quotient topos of a $G$ -topos, for $G$ of prime order	166

## Part Three

15. Comparison theorems	173
16. Base change theorems	180
17. Constructible sheaves and finiteness theorems	191
18. Cohomology of affine varieties	205
19. Relations to the Zariski topology	212
20. Examples and complements	219
20.1 Cohomology of smooth real curves	219
20.2 Examples of sheaves	227
20.3 Fields revisited	236
20.4 Some historical remarks	240

Appendix A: Some complements on spectral spaces	245
---	-----

Appendix B: Cohomology of Artin-Schreier structures	251
---	-----
