<b>Preface</b>	ix
<b>1. Construction of Drinfeld modular varieties</b>	1
(1.0) Notations	1
(1.1) Endomorphisms of the additive group	1
(1.2) Drinfeld modules	3
(1.3) Level structures	5
(1.4) Modular varieties	7
(1.5) Deformation theory	9
(1.6) Hecke algebras, correspondences	12
(1.7) Hecke operators	15
(1.8) Comments and references	18
<b>2. Drinfeld <math>A</math>-modules with finite characteristic</b>	19
(2.0) Notations	19
(2.1) Isogenies	19
(2.2) Isogeny classes of Drinfeld modules	22
(2.3) Tate modules of a Drinfeld module	27
(2.4) Dieudonné modules	31
(2.5) Dieudonné module of a Drinfeld module	35
(2.6) First description of an isogeny class	43
(2.7) Isogeny classes as double coset spaces	47
(2.8) Comments and references	50
<b>3. The Lefschetz numbers of Hecke operators</b>	51
(3.0) Introduction	51

(3.1) The Lefschetz numbers of correspondences	51
(3.2) Counting of fixed points	52
(3.3) Where the orbital integrals come in	56
(3.4) Transfer of conjugacy classes	60
(3.5) Transfer of Haar measures	66
(3.6) The Lefschetz numbers as sums of twisted orbital integrals	72
(3.7) Comments and references	74
<b>4. The fundamental lemma</b>	<b>75</b>
(4.0) Introduction	75
(4.1) Satake isomorphism	76
(4.2) Base change homomorphism	83
(4.3) Orbital integrals	87
(4.4) Twisted orbital integrals	93
(4.5) Main theorem	98
(4.6) The elliptic case	102
(4.7) The general case	114
(4.8) Non-closed orbital integrals	117
(4.9) Comments and references	128
<b>5. Very cuspidal Euler–Poincaré functions</b>	<b>129</b>
(5.0) Introduction	129
(5.1) The function $f$	130
(5.2) Kottwitz’s functions	133
(5.3) Elliptic orbital integrals of $f$	135
(5.4) $K$ -invariant constant terms of $f$	142
(5.5) The function $f$ is very cuspidal	152
(5.6) Non-elliptic orbital integrals of $f$	156
(5.7) Comments and references	156

<b>6. The Lefschetz numbers as sums of global elliptic orbital integrals</b>	158
<b>7. Unramified principal series representations</b>	160
(7.0) Introduction	160
(7.1) Parabolic induction and restriction	160
(7.2) Cuspidal representations	165
(7.3) Principal series representations	168
(7.4) Unramified principal series representations	178
(7.5) Spherical representations	187
(7.6) Comments and references	191
<b>8. Euler–Poincaré functions as pseudocoefficients of the Steinberg representation</b>	192
(8.0) Introduction	192
(8.1) The Steinberg representation	192
(8.2) Main theorem	207
(8.3) Some easy vanishing results	208
(8.4) Cohomological interpretation of $\mathrm{tr}\pi(f)$	213
(8.5) Unitarizable representations	220
(8.6) Proof of Howe and Moore’s criterion of non-unitarizability	226
(8.7) Comments and references	248
<b>Appendices</b>	
<b>A. Central simple algebras</b>	249
(A.0) Central simple algebras	249
(A.1) Bicommutant theorem	250
(A.2) Central simple algebras over local fields	251
(A.3) Central simple algebras over function fields	253
(A.4) Comments and references	255

<b>B. Dieudonné's theory : some proofs</b>	256
(B.1) Proof of (2.4.5)	256
(B.2) Proof of (2.4.6)	268
(B.3) Proof of (2.4.11)	272
(B.4) Comments and references	280
<b>C. Combinatorial formulas</b>	281
(C.0) Introduction	281
(C.1) $q$ -binomial coefficients	281
<b>D. Representations of unimodular, locally compact, totally discontinuous, separated, topological groups</b>	284
(D.0) Introduction	284
(D.1) Smooth representations of $H$	284
(D.2) Admissible representations of $H$	290
(D.3) Induction and restriction	292
(D.4) Cuspidal representations of $H$	311
(D.5) Injective and projective objects in $\text{Rep}_s(H)$ ; cohomology	322
(D.6) Unitarizable representations	327
(D.7) Decomposition of representations into tensor products	334
(D.8) Comments and references	336
<b>References</b>	337
