Notation and conventions	ix
Introduction	1
1 Twisted Jacobi sums	11
2 Cohomology groups of $\mathcal{V} = \mathcal{V}_n^m(\mathbf{c})$	25
3 Twisted Fermat motives	29
4 The inductive structure and the Hodge and Newton polygons	39
5 Twisting and the Picard number	51
6 “Brauer numbers” of twisted Fermat motives	61
7 Evaluating $Q(\mathcal{V}, T)$ at $T = q^{-r}$	77
8 The Lichtenbaum–Milne conjecture	83
9 Remarks, observations and open problems	91
9.1 The case of composite m	91
9.2 The plus norms	95
9.3 Further questions	96
A Tables	99
A.1 A note on the computations	99
A.2 Twisted Fermat motives and their invariants	100
A.3 Picard numbers of $\mathcal{V} = \mathcal{V}_n^m(\mathbf{c})$	104
A.4 “Brauer numbers” of twisted Fermat motives	122
A.5 Global “Brauer numbers” of $\mathcal{V} = \mathcal{V}_n^m(\mathbf{c})$	126

B How to compute the stable Picard number when m is prime	159
