

# Contents

<b>Preface</b>	<b>vii</b>
<b>Chapter 1. Introduction</b>	<b>1</b>
§1. Polynomials and Ideals	1
§2. Monomial Orders and Polynomial Division	6
§3. Gröbner Bases	11
§4. Affine Varieties	16
<b>Chapter 2. Solving Polynomial Equations</b>	<b>24</b>
§1. Solving Polynomial Systems by Elimination	24
§2. Finite-Dimensional Algebras	34
§3. Gröbner Basis Conversion	46
§4. Solving Equations via Eigenvalues	51
§5. Real Root Location and Isolation	63
<b>Chapter 3. Resultants</b>	<b>71</b>
§1. The Resultant of Two Polynomials	71
§2. Multipolynomial Resultants	78
§3. Properties of Resultants	89
§4. Computing Resultants	96
§5. Solving Equations Via Resultants	108
§6. Solving Equations via Eigenvalues	122
<b>Chapter 4. Computation in Local Rings</b>	<b>130</b>
§1. Local Rings	130
§2. Multiplicities and Milnor Numbers	138
§3. Term Orders and Division in Local Rings	151
§4. Standard Bases in Local Rings	164

<b>Chapter 5. Modules</b>	<b>179</b>
§1. Modules over Rings	179
§2. Monomial Orders and Gröbner Bases for Modules	197
§3. Computing Syzygies	210
§4. Modules over Local Rings	222
<b>Chapter 6. Free Resolutions</b>	<b>234</b>
§1. Presentations and Resolutions of Modules	234
§2. Hilbert's Syzygy Theorem	245
§3. Graded Resolutions	252
§4. Hilbert Polynomials and Geometric Applications	266
<b>Chapter 7. Polytopes, Resultants, and Equations</b>	<b>290</b>
§1. Geometry of Polytopes	290
§2. Sparse Resultants	298
§3. Toric Varieties	306
§4. Minkowski Sums and Mixed Volumes	316
§5. Bernstein's Theorem	327
§6. Computing Resultants and Solving Equations	342
<b>Chapter 8. Integer Programming, Combinatorics, and Splines</b>	<b>359</b>
§1. Integer Programming	359
§2. Integer Programming and Combinatorics	374
§3. Multivariate Polynomial Splines	385
<b>Chapter 9. Algebraic Coding Theory</b>	<b>407</b>
§1. Finite Fields	407
§2. Error-Correcting Codes	415
§3. Cyclic Codes	424
§4. Reed-Solomon Decoding Algorithms	435
§5. Codes from Algebraic Geometry	448
