<i>Preface</i>	<i>page</i>	ix
Part One: Multiplicities		1
1 Prime Ideals and the Chow Group		3
1.1 Prime Ideals in Noetherian Rings		3
1.2 Cycles and the Chow Group		7
2 Graded Rings and Samuel Multiplicity		18
2.1 Graded Rings and Hilbert Polynomials		18
2.2 Rees Rings and Associated Graded Rings		26
2.3 Dimension Theory in Local Rings		28
2.4 The Samuel Multiplicity of an Ideal		32
2.5 Mixed Multiplicities and Buchsbaum-Rim Multiplicities		36
3 Complexes and Derived Functors		42
3.1 Derived Functors		42
3.2 Double Complexes		52
3.3 The Koszul Complex		57
4 Homological Properties of Rings and Modules		64
4.1 Cohen-Macaulay and Gorenstein Rings		64
4.2 Dimension		72
4.3 The Acyclicity Lemma		74
4.4 Modules of Finite Projective Dimension		75
4.5 Injective Modules over Noetherian Rings		81
4.6 Dualizing Complexes		86
5 Intersection Multiplicities		93
5.1 Intersection with Divisors		94

5.2	The Euler Characteristic of the Koszul Complex	95
5.3	Serre Intersection Multiplicity	105
6	The Homological Conjectures	107
6.1	Conjectures on Intersection Multiplicities	107
6.2	The Peskine-Szpiro Intersection Theorem	110
6.3	The Multiplicity Conjectures for Graded Modules	114
7	The Frobenius Map	121
7.1	General Properties of the Frobenius Map	122
7.2	Applications to the Homological Conjectures	122
7.3	Hilbert-Kunz Multiplicity and Dutta Multiplicity	125
7.4	Tight Closure	134
7.5	Reduction from Characteristic Zero to Positive Characteristic	137
Part Two: Chern Classes		139
8	Projective Schemes	141
8.1	Projective Schemes Defined by \mathbb{Z} -graded Rings	142
8.2	Projective Schemes Defined by \mathbb{Z}^n -graded Rings	145
8.3	Hilbert Polynomials and Dimension	151
8.4	Proper Maps	156
8.5	Proper Push-Forward of Cycles	157
8.6	Products of Projective Schemes	162
8.7	The Hyperplane Sections on a Projective Scheme	164
8.8	Divisors on Projective Schemes	167
8.9	Commutativity of Intersection with Divisors	170
8.10	Bézout's Theorem	174
9	Chern Classes of Locally Free Sheaves	177
9.1	Sheaves	177
9.2	Chern Classes	180
9.3	Functorial Properties of Chern Classes	187
9.4	Composition of Chern Classes	190
9.5	The Whitney Sum Formula	192
9.6	The Splitting Principle	195
9.7	Chern Characters	196
9.8	Push-Forward of Complexes of Sheaves	200
10	The Grassmannian	207
10.1	Local Computations on the Grassmannian	207

10.2	The Canonical Locally Free Sheaves	210
10.3	The Grassmannian of a Locally Free Sheaf	212
10.4	Functorial Properties of the Grassmannian	216
10.5	Computation of Chern Classes via Free Resolutions	220
11	Local Chern Characters	231
11.1	Chern Classes of \mathfrak{m} -primary Matrices	232
11.2	An Example: Multiplicities of \mathfrak{m} -primary Ideals	235
11.3	Cycles Associated to a Complex of Locally Free Sheaves	236
11.4	The Chern Character of a Complex of Locally Free Sheaves	241
11.5	Complexes of Free Modules over a Local Ring	248
11.6	Compatibility with Intersection with Divisors	250
11.7	Composition of Local Chern Characters	253
12	Properties of Local Chern Characters	258
12.1	The Additivity Formula	258
12.2	The Splitting Principle for Complexes	262
12.3	The Multiplicativity Formula	266
12.4	The Todd Class	269
12.5	The Riemann-Roch Theorem	274
12.6	The Local Riemann-Roch Formula	280
12.7	Local Chern Characters and Dutta Multiplicity	284
13	Applications and Examples	286
13.1	Intersection Multiplicities	286
13.2	Negativity of Intersection Multiplicities	288
13.3	Further Consequences of the Examples	293
13.4	The Intersection Theorem in Mixed Characteristic	295
	<i>Bibliography</i>	297
	<i>Index</i>	301
