Preface xi

0 Preliminaries 1
- 0.1 Projective spaces . . . 1
- 0.2 Power series . . . 2
- 0.3 Surfaces, local coordinates . . . 3
- 0.4 Morphisms . . . 4
- 0.5 Local rings . . . 4
- 0.6 Tangent and cotangent spaces . . . 5
- 0.7 Curves . . . 7
- 0.8 Germs of curves . . . 8
- 0.9 Multiplicity and tangent cone . . . 10
- 0.10 Smooth germs . . . 11
- 0.11 Examples of singular germs . . . 12

1 Newton–Puiseux algorithm 15
- 1.1 Newton polygon . . . 15
- 1.2 Fractionary power series . . . 17
- 1.3 Search for y-roots of $f(x, y)$ . . . 20
- 1.4 The Newton–Puiseux algorithm . . . 22
- 1.5 Puiseux theorem . . . 24
- 1.6 Separation of y-roots . . . 28
- 1.7 The case of convergent series . . . 30
- 1.8 Algebraic properties of $\mathbb{C}\{x, y\}$ . . . 32
- 1.9 Exercises . . . 35

2 First local properties of plane curves 39
- 2.1 The branches of a germ . . . 39
- 2.2 The Puiseux series of a germ . . . 40
- 2.3 Points on curves around O . . . 44
- 2.4 Local rings of germs . . . 46
- 2.5 Parameterizing branches . . . 49
- 2.6 Intersection multiplicity . . . 53
- 2.7 Pencils and linear systems . . . 57

2.8 Exercises 61

3 Infinitely near points **67**
3.1 Blowing up 67
3.2 Transforming curves and germs 70
3.3 Infinitely near points 76
3.4 Enriques' definition of infinitely near points 81
3.5 Proximity 82
3.6 Free and satellite points 86
3.7 Resolution of singularities 88
3.8 Equisingularity 93
3.9 Enriques diagrams 98
3.10 The ring in the first neighbourhood 102
3.11 The rings in the successive neighbourhoods 106
3.12 Artin theorem for plane curves 113
3.13 Exercises 115

4 Virtual multiplicities **119**
4.1 Curves through a weighted cluster 119
4.2 When virtual multiplicities are effective 123
4.3 Blowing up all points in a cluster 131
4.4 Exceptional divisors and dual graphs 134
4.5 The total transform of a curve 138
4.6 Unloading 144
4.7 The number of conditions 149
4.8 Adjoint germs and curves 152
4.9 Noether's $Af + B\varphi$ theorem 154
4.10 Exercises 156

5 Analysis of branches **159**
5.1 Characteristic exponents 159
5.2 The first characteristic exponent 161
5.3 Beyond the first cluster of satellite points 166
5.4 Composing blowing-ups 170
5.5 Enriques' theorem 172
5.6 The inversion formula 178
5.7 The position of points 179
5.8 The semigroup of a branch 184
5.9 Approximate roots of polynomials in $\mathbb{C}\{x\}[y]$ 190
5.10 Exercises 193

6 Polar germs and related invariants **197**
6.1 Definition and first properties of polar germs 197
6.2 Transforming polar germs 200
6.3 The Plücker formula 203
6.4 The Milnor number 206

6.5 Virtual behaviour of polar germs 208
6.6 On the effective behaviour of polar germs 210
6.7 Base points of polars and analytic invariants 217
6.8 Polar invariants of irreducible germs 221
6.9 More on infinitely near points 225
6.10 Components of the polar germs 230
6.11 Polar invariants: the general case 237
6.12 Exercises 243

7 Linear families of germs **249**
7.1 Linear series on a projective line 249
7.2 Base points of pencils and linear systems 252
7.3 μ-constant equisingularity criteria 259
7.4 Special germs and jacobian determinants 265
7.5 E-sufficiency degree 267
7.6 E-sufficiency degree and polar invariants 272
7.7 A-sufficiency 277
7.8 Exercises 282

8 Valuations and complete ideals **285**
8.1 Valuations of the ring $\mathcal{O}_{S,O}$ 285
8.2 Classification of valuations of $\mathcal{O}_{S,O}$ 295
8.3 Complete ideals and linear systems 304
8.4 Zariski's theory of complete ideals 308
8.5 Generic polar germs 314
8.6 Base points of polar germs 318
8.7 Exercises 323

A Applications to affine Geometry **325**
A.1 Abhyankar–Moh theorem 325
A.2 Jung's theorem 330

Bibliography **333**

Index **339**
