<b>Preface</b>	<b>v</b>
<b>List of Notation</b>	<b>xiii</b>
<b>Introduction: The Tale of the Mori Program</b>	<b>1</b>
<b>1 Birational Geometry of Surfaces</b>	<b>9</b>
1.1 Castelnuovo's Contractibility Criterion . . . . .	10
1.2 Surfaces Whose Canonical Bundles Are Not Nef I . . . . .	21
1.3 Surfaces Whose Canonical Bundles Are Not Nef II . . . . .	36
1.4 Basic Properties of Mori Fiber Spaces in Dimension 2 . . . . .	42
1.5 Basic Properties of Minimal Models in Dimension 2 . . . . .	51
1.6 Basic Properties of Canonical Models in Dimension 2 . . . . .	75
1.7 The Enriques Classification of Surfaces . . . . .	83
1.8 Birational Relation Among Surfaces . . . . .	88
<b>2 Logarithmic Category</b>	<b>109</b>
2.1 Iitaka's Philosophy . . . . .	110
2.2 Log Birational Geometry of Surfaces . . . . .	118
<b>3 Overview of the Mori Program</b>	<b>129</b>
3.1 Minimal Model Program in Dimension 3 or Higher . . . . .	131
3.2 Basic Properties of Mori Fiber Spaces in Dimension 3 or Higher . . . . .	141
3.3 Basic Properties of Minimal Models in Dimension 3 or Higher .	153
3.4 Birational Relations Among Minimal Models and Mori Fiber Spaces in Dimension 3 or Higher . . . . .	155

3.5	Variations of the Mori Program . . . . .	161
<b>4</b>	<b>Singularities</b>	<b>163</b>
4.1	Terminal Singularities . . . . .	164
4.2	Canonical Singularities . . . . .	168
4.3	Logarithmic Variations . . . . .	173
4.4	Discrepancy and Singularities . . . . .	179
4.5	Canonical Cover . . . . .	183
4.6	Classification in Dimension 2 . . . . .	191
<b>5</b>	<b>Vanishing Theorems</b>	<b>250</b>
5.1	Kodaira Vanishing Theorem . . . . .	251
5.2	Kawamata–Viehweg Vanishing Theorem . . . . .	259
<b>6</b>	<b>Base Point Freeness of Adjoint Linear Systems</b>	<b>268</b>
6.1	Relevance of Log Category to Base Point Freeness of Adjoint Linear Systems . . . . .	269
6.2	Base Point Freeness Theorem . . . . .	272
6.3	Nonvanishing Theorem of Shokurov . . . . .	279
<b>7</b>	<b>Cone Theorem</b>	<b>286</b>
7.1	Rationality Theorem and Boundedness of the Denominator . . . . .	286
7.2	Cone Theorem . . . . .	297
<b>8</b>	<b>Contraction Theorem</b>	<b>301</b>
8.1	Contraction Theorem . . . . .	301
8.2	Contractions of Extremal Rays . . . . .	306
8.3	Examples . . . . .	309
<b>9</b>	<b>Flip</b>	<b>317</b>
9.1	Existence of Flip . . . . .	318
9.2	Termination of Flips . . . . .	322
<b>10</b>	<b>Cone Theorem Revisited</b>	<b>324</b>
10.1	Mori’s Bend and Break Technique . . . . .	325
10.2	A Proof in the Smooth Case After Mori . . . . .	330
10.3	Lengths of Extremal Rays . . . . .	332
<b>11</b>	<b>Logarithmic Mori Program</b>	<b>338</b>
11.1	Log Minimal Model Program in Dimension 3 or Higher . . . . .	338
11.2	Log Minimal Models and Log Mori Fiber Spaces in Dimension 3 or Higher . . . . .	342
11.3	Birational Relations Among Log Minimal Models and Log Mori Fiber Spaces . . . . .	345

<b>12 Birational Relation among Minimal Models</b>	<b>349</b>
12.1 Flops Among Minimal Models . . . . .	350
12.2 Chamber Structure of Ample Cones of Minimal Models . . . . .	358
12.3 The Number of Minimal Models Is Finite (!) . . . . .	363
<b>13 Birational Relation Among Mori Fiber Spaces</b>	<b>368</b>
13.1 Sarkisov Program . . . . .	369
13.2 Termination of the Sarkisov Program . . . . .	392
13.3 Applications . . . . .	399
<b>14 Birational Geometry of Toric Varieties</b>	<b>413</b>
14.1 Cone Theorem and Contraction Theorem for Toric Varieties . . . . .	413
14.2 Toric Extremal Contractions and Flips . . . . .	425
14.3 Toric Canonical and Log Canonical Divisors . . . . .	442
14.4 Toric Minimal Model Program . . . . .	447
14.5 Toric Sarkisov Program . . . . .	449
