

# Contents

Chapter 1. Introduction	3
1.1 General comments	3
Chapter 2. The Classical Case When $n = 1$	22
Chapter 3. Differential Geometry of Symmetric Products	31
Chapter 4. Absolute Differentials (I)	42
4.1 Generalities	42
4.2 Spreads	48
Chapter 5. Geometric Description of $\underline{TZ}^n(X)$	54
5.1 The description	54
5.2 Intrinsic formulation	57
Chapter 6. Absolute Differentials (II)	61
6.1 Absolute differentials arise from purely geometric considerations	61
6.2 A nonclassical case when $n = 1$	67
6.3 The differential of the tame symbol	70
Chapter 7. The $\mathcal{E}xt$ -definition of $TZ^2(X)$ for $X$ an Algebraic Surface	84
7.1 The definition of $\underline{TZ}^2(X)$	84
7.2 The map $T \text{Hilb}^2(X) \rightarrow TZ^2(X)$	87
7.3 Relation of the Puiseux and algebraic approaches	92
7.4 Further remarks	97
Chapter 8. Tangents to Related Spaces	100
8.1 The definition of $\underline{TZ}^1(X)$ for a surface $X$	100
8.2 Duality and the description of $\underline{TZ}^1(X)$ using differential forms	115
8.3 Definitions of $\underline{TZ}_1^1(X)$ for $X$ a curve and a surface	123
8.4 Identification of the geometric and formal tangent spaces to $CH^2(X)$ for $X$ a surface	141
8.5 Canonical filtration on $TCH^n(X)$ and its relation to the conjectural filtration on $CH^n(X)$	145

Chapter 9. Applications and Examples	150
9.1 The generalization of Abel's differential equations	150
9.2 On the integration of Abel's differential equations	162
9.3 Surfaces in $\mathbb{P}^3$	166
9.4 Example: $(\mathbb{P}^2, T)$	176
Chapter 10. Speculations and Questions	186
10.1 Definitional issues	186
10.2 Obstructedness issues	187
10.3 Null curves	190
10.4 Arithmetic and geometric estimates	191
Bibliography	195
Index	199
