Introduction	iii
1. Permutation groups	1
1.1 Preliminary definitions	1
1.2 Counting principles	3
1.3 Transitivity	6
1.4 Applications to group theory	9
1.5 Primitivity	11
1.6 Regular normal subgroups	15
2. Geometry of finite spaces	19
2.1 Introduction	19
2.2 Finite fields	21
2.3 Finite vector spaces	22
2.4 The structure of $GL(V)$ and $SL(V)$	26
2.5 Projective spaces and projective groups	32
2.6 Miscellaneous results on projective spaces	37
2.7 The classical simple groups	42
3. Designs	48
3.1 Four fundamental problems	48
3.2 Designs	49
3.3 The type of a design	53
3.4 Symmetric designs	55
3.5 Automorphisms and extensions of designs	60
3.6 The Mathieu groups	64
3.7 The transitivity problem	69

4. Linear graphs	71
4.1 Definitions and examples	71
4.2 Regular graphs	74
4.3 Graphs and permutation groups	82
4.4 Distance-transitive graphs	86
4.5 Distance-transitive graphs of diameter 2	96
4.6 Graphs with no triangles	102
4.7 Conclusion	109
Appendix	110
Guide to the literature	113
Index	116
