

# Contents

## Chapter 1

<b>Basic Concepts</b> . . . . .	1
§1. The Definition of a Group and Some Examples . . . . .	1
§2. Subgroups . . . . .	9
§3. Cosets . . . . .	19
§4. Normal Subgroups; Factor Groups . . . . .	29
§5. Homomorphisms; Isomorphism Theorems . . . . .	35
§6. Automorphisms . . . . .	46
§7. Permutation Groups; $G$ -sets. . . . .	56
§8. Operator Groups; Semidirect Products . . . . .	66
§9. General Linear Groups . . . . .	73

## Chapter 2

<b>Fundamental Theorems</b> . . . . .	86
§1. Theorems about $p$ -Groups . . . . .	86
§2. Theorems of Sylow . . . . .	95
§3. Subnormal Series; Schreier's Refinement Theorem . . . . .	115
§4. The Krull-Remak-Schmidt Theorem . . . . .	127
§5. Fundamental Theorems on Abelian Groups . . . . .	144
§6. Generators and Relations . . . . .	164
§7. Extensions of Groups and Cohomology Theory . . . . .	192
§8. Applications of Cohomology Theory: The Schur-Zassenhaus Theorem . . . . .	230
§9. Central Extensions, Schur's Multiplier . . . . .	245
§10. Wreath Products . . . . .	268

## Chapter 3

<b>Some Special Classes of Groups</b> . . . . .	280
§1. Torsion-free Abelian Groups . . . . .	280
§2. Symmetric Groups and Alternating Groups . . . . .	291
§3. Geometry of Linear Groups . . . . .	310
§4. Coxeter Groups . . . . .	340
§5. Surveys of Finite Simple Groups . . . . .	370
§6. Finite Subgroups of Two-dimensional Special Linear Groups . . . . .	392

<b>Bibliography</b> . . . . .	419
-------------------------------	-----

<b>Index</b> . . . . .	428
