0.	Introduction	XI
I.	Cyclic Renormalization	1
0.	Introduction	1
1.	Renormalization	1
	Appendix A: Denjoy expansion	8
2.	Interval renormalization	15
3.	Systems with prescribed renormalizations	26
4.	Infinite interval renormalizability	35
	Appendix B: Embedding ordered Cantor-like sets in real intervals	42
5.	Interval renormalization and periodic points	46
6.	Self-similarity operators	47
II.	Itinerary Calculus and Renormalization	53
0.	Introduction	53
1.	Preliminaries	55
	Appendix C: The multi-modal case	64
2.	Maximal elements; the quadratic case	67
3.	Maximal elements; the non-quadratic case	72
4.	The $*$ -product	75
5.	The $*$ -product theorem	79
6.	Shift dynamics on $\hat{G}_0 \cup G_0C$	83
7.	The $*$ -product renormalization theorem	86
8.	Iterated $*$ -products	89
9.	Realization by unimodal maps	91
10.	A permutation formulation	94
11.	The cycle structure of interval self-maps	98
III.	Spherically Transitive Automorphisms of Rooted Trees	103
0.	Motivation	103

1.	Relative automorphism groups of trees	105
2.	Rooted trees, ends and order structures	108
3.	Spherically homogeneous rooted trees $X(\mathbf{q})$	114
4.	Spherically transitive automorphisms	116
5.	Dynamics on the ends of X and interval renormalization .	122
6.	Some group theoretic renormalization operators	124

IV. Closed Normal Subgroups of $Aut(X(\mathbf{q}))$ 135

0.	Introduction and notation	135
1.	The symmetric group S_q	135
2.	Wreath products	136
3.	Normal subgroups of wreath products	141
4.	Iterated wreath products and rooted trees	144
5.	Closed normal subgroups of $G = G((\mathbf{Q}, \mathbf{Y}))$	148
6.	The G -module V^{X_n}	152
