## Symbols

<b>1. Introduction</b> .....	1
1.1 Motivation .....	1
1.2 A brief history of quilts .....	3
1.3 Drawing the quilt of a Norton system .....	4
1.4 Overview .....	7
<b>2. Background material</b> .....	9
2.1 Notation .....	9
2.2 Triangle groups .....	10
2.3 Seifert groups .....	13
2.4 Braid groups .....	16
2.5 Some elementary homology theory .....	19
2.6 Graphs and surfaces .....	22
2.7 The combinatorial Gauss-Bonnet theorem .....	24
2.8 Other background material .....	26

---

## Part I. The geometry of Seifert group actions

---

<b>3. Quilts</b> .....	29
3.1 Permutation representations .....	30
3.2 Modular quilts .....	31
3.3 Quilt diagrams and quilts .....	38
3.4 Drawing quilts in practice .....	50
3.5 Remarks and references .....	52
<b>4. Norton systems and their quilts</b> .....	55
4.1 Summary of Chap. 3 for $\Sigma = \mathbf{B}_3$ .....	55
4.2 Norton systems .....	57
4.3 Drawing the quilt of a Norton system .....	61
4.4 Examples and exercises .....	67
4.5 Mirror-isomorphism .....	69

<b>5. Examples of quilts</b> .....	71
5.1 Naming and drawing quilts .....	71
5.2 The $B_3$ -quilts with fewer than 6 seams .....	72
5.3 The groups of order $< 12$ .....	74
5.4 Abelian groups .....	76
5.5 Exercises .....	78
<b>6. The combinatorics of quilts</b> .....	81
6.1 Lifting conditions for quilts .....	81
6.2 Curvature formulas .....	89
<b>7. Classical interpretations of quilts</b> .....	93
7.1 A theorem of Conway, Coxeter, and Shephard .....	93
7.2 Central extensions of triangle group quotients .....	94
7.3 Quilts and Seifert fibered 3-manifolds .....	96
<hr/>	
<b>Part II. The structure problem</b>	
<hr/>	
<b>8. Presentations and the structure problem</b> .....	101
8.1 The group of a quilt .....	101
8.2 The polyhedral presentation .....	103
8.3 Other genus zero presentations .....	108
8.4 Higher genus presentations .....	111
<b>9. Small snug quilts</b> .....	119
9.1 Enumerating snug quilts .....	119
9.2 Results .....	121
<b>10. Monodromy systems</b> .....	127
10.1 Monodromy representations of $B_n$ .....	127
10.2 Involution $M(3)$ -systems .....	127
<b>11. Quilts for groups involved in the Monster</b> .....	133
11.1 Quilts from $n$ -transpositions .....	133
11.2 Conway's groups $Co_n$ .....	135
11.3 Fischer's groups $Fi_{21}$ and $Fi_{22}$ .....	140
11.4 Groups in the Suzuki chain .....	142
11.5 Alternating groups .....	144
11.6 Some other $F_m$ .....	147
11.7 Groups of 6-transposition quilts .....	149

**12. Some results on the structure problem** . . . . . 151

    12.1 Finite quilts with infinite groups . . . . . 151

    12.2 Perfect quilts and perfect groups . . . . . 152

    12.3 Shadowing . . . . . 154

    12.4 Monopoint Norton systems . . . . . 156

**13. Further directions** . . . . . 157

    13.1 Other work on quilts and Norton systems . . . . . 157

    13.2 Norton's action and generalized moonshine . . . . . 159

    13.3 Enumerating snug quilts . . . . . 159

    13.4 Quilt groups . . . . . 160

    13.5 Variations on Norton's action and Norton systems . . . . . 161

    13.6 Quilts and central extensions . . . . . 162

    13.7 Generalizations of quilts . . . . . 163

---

**Appendix**

---

**A. Independent generators for modular subgroups** . . . . . 165

    A.1 Notation for modular subgroups . . . . . 165

    A.2 Some combinatorial group theory . . . . . 166

    A.3 Finite index modular subgroups . . . . . 171

    A.4 Geometric independent generators . . . . . 175

**References** . . . . . 179

**Index** . . . . . 183
