

# Contents

<b>Preface</b> . . . . .	xv
<b>Notation</b> . . . . .	xxi
<b>0 Introduction and Overview</b> . . . . .	1
0.1 Preliminary comments and definitions . . . . .	2
0.2 Overview of the chapters . . . . .	3
0.3 On CFSG . . . . .	8
0.4 The windows . . . . .	9
0.5 The ‘notes’ . . . . .	9
<b>1 Basic Techniques of Subgroup Counting</b> . . . . .	11
1.1 Permutation representations . . . . .	12
1.2 Quotients and subgroups . . . . .	13
1.3 Group extensions . . . . .	14
1.4 Nilpotent and soluble groups . . . . .	20
1.5 Abelian groups I . . . . .	22
1.6 Finite $p$ -groups . . . . .	24
1.7 Sylow’s theorem . . . . .	26
1.8 Restricting to soluble subgroups . . . . .	28
1.9 Applications of the ‘minimal index’ . . . . .	29
1.10 Abelian groups II . . . . .	31
1.11 Growth types . . . . .	34
Notes . . . . .	36
<b>2 Free Groups</b> . . . . .	37
2.1 The subgroup growth of free groups . . . . .	39
2.2 Subnormal subgroups . . . . .	42
2.3 Counting $d$ -generator finite groups . . . . .	43
Notes . . . . .	50
<b>3 Groups with Exponential Subgroup Growth</b> . . . . .	51
3.1 Upper bounds . . . . .	55
3.2 Lower bounds . . . . .	58
3.3 Free pro- $p$ groups . . . . .	61

3.4	Normal subgroups in free pro- $p$ groups . . . . .	63
3.5	Relations in $p$ -groups and Lie algebras . . . . .	69
	Notes . . . . .	72
<b>4</b>	<b>Pro-<math>p</math> Groups</b> . . . . .	<b>73</b>
4.1	Pro- $p$ groups with polynomial subgroup growth . . . . .	74
4.2	Pro- $p$ groups with slow subgroup growth . . . . .	77
4.3	The groups $SL_r^1(\mathbb{F}_p[[t]])$ . . . . .	80
4.4	$\Lambda$ -perfect groups . . . . .	83
4.5	The Nottingham group . . . . .	86
4.6	Finitely presented pro- $p$ groups . . . . .	86
	Notes . . . . .	90
<b>5</b>	<b>Finitely Generated Groups with Polynomial Subgroup Growth</b> . . . . .	<b>91</b>
5.1	Preliminary observations . . . . .	94
5.2	Linear groups with PSG . . . . .	96
5.3	Upper chief factors . . . . .	98
5.4	Groups of prosoluble type . . . . .	101
5.5	Groups of finite upper rank . . . . .	102
5.6	The degree of polynomial subgroup growth . . . . .	104
	Notes . . . . .	108
<b>6</b>	<b>Congruence Subgroups</b> . . . . .	<b>111</b>
6.1	The characteristic 0 case . . . . .	115
6.2	The positive characteristic case . . . . .	121
6.3	Perfect Lie algebras . . . . .	125
6.4	Normal congruence subgroups . . . . .	128
	Notes . . . . .	132
<b>7</b>	<b>The Generalized Congruence Subgroup Problem</b> . . . . .	<b>133</b>
7.1	The congruence subgroup problem . . . . .	136
7.2	Subgroup growth of lattices . . . . .	141
7.3	Counting hyperbolic manifolds . . . . .	149
	Notes . . . . .	151
<b>8</b>	<b>Linear Groups</b> . . . . .	<b>153</b>
8.1	Subgroup growth, characteristic 0 . . . . .	155
8.2	Residually nilpotent groups . . . . .	156
8.3	Subgroup growth, characteristic $p$ . . . . .	156
8.4	Normal subgroup growth . . . . .	158
	Notes . . . . .	160
<b>9</b>	<b>Soluble Groups</b> . . . . .	<b>161</b>
9.1	Metabelian groups . . . . .	162
9.2	Residually nilpotent groups . . . . .	164
9.3	Some finitely presented metabelian groups . . . . .	167
9.4	Normal subgroup growth in metabelian groups . . . . .	172
	Notes . . . . .	175

<b>10</b>	<b>Profinite Groups with Polynomial Subgroup Growth</b>	177
10.1	Upper rank	180
10.2	Profinite groups with wPSG: structure	181
10.3	Quasi-semisimple groups	187
10.4	Profinite groups with wPSG: characterization	194
10.5	Weak PSG = PSG	197
	Notes	200
<b>11</b>	<b>Probabilistic Methods</b>	201
11.1	The probability measure	205
11.2	Generation probabilities	207
11.3	Maximal subgroups	209
11.4	Further applications	211
11.5	Pro- $p$ groups	214
	Notes	217
<b>12</b>	<b>Other Growth Conditions</b>	219
12.1	Rank and bounded generation	225
12.2	Adelic groups	226
12.3	The structure of finite linear groups	229
12.4	Composition factors	230
12.5	BG, PIG and subgroup growth	233
12.6	Residually nilpotent groups	234
12.7	Arithmetic groups and the CSP	236
12.8	Examples	237
	Notes	241
<b>13</b>	<b>The Growth Spectrum</b>	243
13.1	Products of alternating groups	244
13.2	Some finitely generated permutation groups	248
13.3	Some profinite groups with restricted composition factors	255
13.4	Automorphisms of rooted trees	260
	Notes	266
<b>14</b>	<b>Explicit Formulas and Asymptotics</b>	269
14.1	Free groups and the modular group	269
14.2	Free products of finite groups	271
14.3	Modular subgroup arithmetic	274
14.4	Surface groups	277
	Notes	283
<b>15</b>	<b>Zeta Functions I: Nilpotent Groups</b>	285
15.1	Local zeta functions as $p$ -adic integrals	290
15.2	Alternative methods	297
15.3	The zeta function of a nilpotent group	304
	Notes	307

<b>16</b>	<b>Zeta Functions II: <math>p</math>-adic Analytic Groups</b>	309
16.1	Integration on pro- $p$ groups	312
16.2	Counting subgroups in a $p$ -adic analytic group	313
16.3	Counting orbits	315
16.4	Counting $p$ -groups	316
	Notes	318

## Windows

<b>1</b>	<b>Finite Group Theory</b>	319
1	Hall subgroups and Sylow bases	319
2	Carter subgroups	320
3	The Fitting subgroup	320
4	The generalized Fitting subgroup	322
5	Tate's theorem	322
6	Rank and $p$ -rank	323
7	Schur multiplier	323
8	Powerful $p$ -groups	324
9	$GL_n$ and $Sym(n)$	325
<b>2</b>	<b>Finite Simple Groups</b>	329
1	The list	330
2	Generators	331
3	Subgroups	332
4	Representations	332
5	Automorphisms	334
6	Schur multipliers	335
7	An elementary proof	335
<b>3</b>	<b>Permutation Groups</b>	337
1	Primitive groups	337
2	Groups with restricted sections	338
3	Subgroups of alternating groups	343
<b>4</b>	<b>Profinite Groups</b>	349
1	Completions	350
2	Free profinite groups	352
3	Profinite presentations	353
<b>5</b>	<b>Pro-<math>p</math> Groups</b>	357
1	Generators and relations	357
2	Pro- $p$ groups of finite rank	359
3	Linear pro- $p$ groups over local fields	361
4	Automorphisms of finite $p$ -groups	363
5	Hall's enumeration principle	364

<b>6</b>	<b>Soluble Groups</b> . . . . .	367
1	Nilpotent groups . . . . .	367
2	Soluble groups of finite rank . . . . .	369
3	Finitely generated metabelian groups . . . . .	372
<b>7</b>	<b>Linear Groups</b> . . . . .	375
1	Soluble groups . . . . .	375
2	Jordan's theorem . . . . .	376
3	Monomial groups . . . . .	376
4	Finitely generated groups . . . . .	376
5	Lang's theorem . . . . .	377
<b>8</b>	<b>Linearity Conditions for Infinite Groups</b> . . . . .	379
1	Variations on Mal'cev's local theorem . . . . .	379
2	Groups that are residually of bounded rank . . . . .	383
3	Applications of Ado's theorem . . . . .	385
<b>9</b>	<b>Strong Approximation for Linear Groups</b> . . . . .	389
1	A variant of the Strong Approximation Theorem . . . . .	390
2	Subgroups of $SL_n(\mathbb{F}_p)$ . . . . .	397
3	The 'Lubotzky alternative' . . . . .	400
4	Strong approximation in positive characteristic . . . . .	406
<b>10</b>	<b>Primes</b> . . . . .	409
1	The Prime Number Theorem . . . . .	409
2	Arithmetic progressions and the Bombieri-Vinogradov theorem . . . . .	411
3	Global fields and Chebotarev's theorem . . . . .	413
<b>11</b>	<b>Probability</b> . . . . .	415
<b>12</b>	<b><math>p</math>-adic Integrals and Logic</b> . . . . .	419
1	Results . . . . .	419
2	A peek inside the black box . . . . .	421
<b>Open Problems</b> . . . . .		425
1	'Growth spectrum' . . . . .	425
2	Normal subgroup growth in pro- $p$ groups and metabelian groups . . . . .	428
3	The degree of f.g. nilpotent groups . . . . .	428
4	Finite extensions . . . . .	429
5	Soluble groups . . . . .	429
6	Isospectral groups . . . . .	429
7	Congruence subgroups, lattices in Lie groups . . . . .	430
8	Other growth conditions . . . . .	430
9	Zeta functions . . . . .	431
<b>Bibliography</b> . . . . .		433
<b>Index</b> . . . . .		446
