Preface	vii
1 Representations of Posets over a Field	1
1.1 Vector Spaces with Distinguished Subspaces	1
1.2 Representations of Posets and Matrix Problems	10
1.3 Finite Representation Type	19
1.4 Tame and Wild Representation Type	31
1.5 Generic Representations	39
2 Torsion-Free Abelian Groups	47
2.1 Quasi-isomorphism and Isomorphism at p	47
2.2 Near-isomorphism of Finite Rank Groups	56
2.3 Stable Range Conditions for Finite Rank Groups	62
2.4 Self-Small Groups and Endomorphism Rings	69
3 Butler Groups	76
3.1 Types and Completely Decomposable Groups	76
3.2 Characterizations of Finite Rank Groups	88
3.3 Quasi-isomorphism and \mathbb{Q} -Representations of Posets	100
3.4 Countable Groups	105
3.5 Quasi-Generic Groups	111
4 Representations over a Discrete Valuation Ring	126
4.1 Finite and Rank-Finite Representation Type	126
4.2 Wild Modulo p Representation Type	135
4.3 Finite Rank Butler Groups and Isomorphism at p	140

5	Almost Completely Decomposable Groups	144
5.1	Characterizations and Properties	144
5.2	Isomorphism at p and Representation Type	154
5.3	Uniform Groups	164
5.4	Primary Regulating Quotient Groups	169
6	Representations over Fields and Exact Sequences	173
6.1	Projectives, Injectives, and Exact Sequences	173
6.2	Coxeter Correspondences	178
6.3	Almost Split Sequences	187
6.4	A Torsion Theory and Localizations	191
7	Finite Rank Butler Groups	197
7.1	Projectives, Injectives, and Exact Sequences	197
7.2	Endomorphism Rings	202
7.3	Bracket Groups	205
8	Applications of Representations and Butler Groups	211
8.1	Torsion-Free Modules over Discrete Valuation Rings	211
8.2	Finite Valuated Groups	218
	References	223
	List of Symbols	235
	Index of Terms	241
