

Contents

Chapter 1 Elements of Homological Algebra

1. Modules
2. Tensor Products
3. Existence of Tensor Products
4. The Homomorphism $f \otimes g$
5. Tensor Product of Algebras
6. Trilinear Maps
7. Exactness
8. Homology and Cohomology
9. Homotopy

Chapter 2 Cohomology of Finite Groups

10. Group Rings
11. The Trace Map
12. G -Regular Modules
13. Complete Resolutions
14. The Dependence of $H^r(G,A)$ on the G -module A
15. Existence of Complete Resolutions
16. The Uniqueness of Cohomology Groups

Chapter 3 Computations

17. The Computation of $H^{-1}(G,A)$
 18. Standard Complete Resolutions
 19. Extensions
 20. The Negative Cochain Complex
 21. Comparison with Homology and Cohomology of Monoids
 22. Cyclic Groups
 23. Trivial Action
- Appendix: Cohomology of Monoids

Chapter 4
Relations with Subgroups and Quotient Groups

- 24. Induced Homomorphisms
- 25. The Restriction and Transfer Maps
- 26. Sylow Subgroups
- 27. Generalization of G-Regular Modules
- 28. The Inflation Map
- 29. Cohomological Triviality
- 30. Cohomological Equivalence

Chapter 5
Cup Products

- 31. Definition of Cup Product
- 32. Properties of Cup Products
- 33. Uniqueness
- 34. Further Properties of Cup Products
- 35. Pairings
- 36. Duality
- 37. Periodicity

Chapter 6
Applications

- 38. Outer Automorphisms of Finite p-Groups
- 39. Cohomological Triviality and Finite p-Nilpotent Groups
- 40. Galois Groups
- 41. Abelian Galois Groups
- 42. Class Formations
