

Table of Contents

- Part 1 The classical theory of classical groups
- A. The special linear group $SL(n,q)$
 - B. Bilinear forms
 - C. Symplectic geometry
 - D. Unitary geometry
 - E. Orthogonal geometry
 - F. Further remarks concerning orthogonal groups
 - G. Summary
- Part 2 Recent results
- A. The Buekenhout-Shult Theorem
 - B. Rank 3 characterizations
 - C. Perin's method
 - D. Generation
 - E. Permutation representations: degrees
 - F. Permutation representations: arbitrary rank
 - G. Permutation representations: ranks 2 and 3
- Part 3 The root group geometry of $E_8(q)$
- A. The root system
 - B. Commutator relations
 - C. Root groups
 - D. Root group geometry
