

Contents

1	Basic Group Theory	1
1.1	Generalities and Notation	1
1.2	Semidirect Products	10
1.3	Abelian Groups	12
1.4	Permutation Groups	14
2	Definability	18
3	Interpretability	29
3.1	Definitions	30
3.2	Solvable Groups	33
3.2.1	Finding a Ring in a Solvable Group	33
3.2.2	Heisenberg Groups	37
3.2.3	Some Other Nilpotent Groups	38
3.3	Projective Spaces	40
3.3.1	Projective Planes	40
3.3.2	Automorphism Groups of Projective Planes	42
3.3.3	Projective Spaces	44
3.4	Algebraic Groups	46
3.4.1	Algebraic Geometry	46
3.4.2	Affine Algebraic Groups	48
4	Ranked Universe	52
4.1	Definitions	52
4.1.1	Universe	52
4.1.2	Rank	56
4.2	Basic Properties of Rank	58
4.3	Uniform Families	66
5	Basic Properties	68
5.1	Descending Chain Condition	69
5.2	Connected Component	74
5.3	Uniformly Definable Families of Subgroups	80
5.4	Zil'ber's Indecomposability Theorem	84

5.5	Definable Closure	88
6	Nilpotent Groups	95
6.1	Minimal Subgroups	96
6.2	Structure of Nilpotent Groups	98
6.3	Nilpotent Groups of Morley Rank 2	103
6.4	Locally Finite p -Subgroups	104
7	Semisimple Groups	109
7.1	Semisimple Groups	109
7.2	Fitting Subgroup and the Radical	111
7.3	Socle	113
7.4	Generalized Fitting Subgroup	117
8	Fields and Rings	122
8.1	Fields	122
8.2	Regular Subgroups of $GL_n(K)$	126
8.3	Bachmann's Theorem	134
9	Solvable Groups	140
9.1	Fundamental Results	141
9.2	Derived Subgroup	147
9.3	Splitting	148
9.4	Solvable Groups of Class 2	150
9.5	Groups of Morley Rank 2	153
9.5.1	Nonnilpotent Groups of Morley Rank 2	153
9.5.2	Nilpotent Groups of Morley Rank 2, Revisited	154
9.6	Fitting Subgroup	155
9.7	π^* -Subgroups of Solvable Groups	155
9.8	Schur-Zassenhaus Theorem	159
9.8.1	Connectedness of Sylow p -Subgroups	161
9.8.2	Maschke's Theorem	162
9.8.3	Schur-Zassenhaus Theorem	163
9.8.4	Conjugacy of Complements	165
9.9	Hall Theorem	168
10	2-Sylow Theory	172
10.1	Properties of Involutions	173
10.2	Actions of Involutions	175
10.3	2-Sylow Theorem	175
10.3.1	Reminiscences from Finite Group Theory	176

10.3.2	2-Sylow Theorem for Finite Groups	176
10.3.3	Proof of the 2-Sylow Theorem	177
10.3.4	Sylow 2-Subgroups of Algebraic Groups	182
10.4	Baer-Suzuki Theorem	183
10.5	Strongly Embedded Subgroups	185
10.6	Conjugacy Families and Conjugacy Functors	187
10.6.1	Fusion	187
10.6.2	Alperin-Goldschmidt Theorem	188
10.6.3	Conjugacy Families	190
10.6.4	Every Inductive Family Is a Conjugation Family	192
10.6.5	Proof of Alperin-Goldschmidt Theorem	195
11	Permutation Groups	198
11.1	Clifford's Theorem	200
11.2	Frobenius Groups	203
11.2.1	Generalities and Questions	204
11.2.2	Definability	206
11.2.3	When T is Finite	209
11.2.4	Solvable Frobenius Groups	211
11.2.5	Minimal Counterexamples	215
11.3	Split Doubly Transitive Groups	219
11.4	Sharply 2-Transitive Groups	222
11.4.1	Generalities	222
11.4.2	Connectedness of H	231
11.4.3	Some Easy Classification Results	232
11.4.4	A Few Rank Inequalities	234
11.4.5	When H Is Nilpotent	236
11.4.6	A Few Interesting Facts	237
11.5	Zassenhaus Groups	238
11.5.1	Generalities	238
11.5.2	Definability of the Action	240
11.5.3	Sharply 3-Transitive Groups	244
11.5.4	When T Has an Involution	245
11.5.5	When U Has a Central Involution	245
11.5.6	Discussion	250
11.6	Groups Acting on Strongly Minimal Sets	251
12	Geometries	255
12.1	Generalized n -Gons	255
12.1.1	Generalities	255
12.1.2	Ranked Generalized n -Gons	259
12.2	Sharply Flag Transitive Groups	265

12.2.1	ABA-Groups	265
12.2.2	When G Is Solvable of Finite Morley Rank	268
12.3	BN -Pairs of Tits Rank ≥ 3	271
12.3.1	Generalities	271
12.3.2	BN -Pairs	272
12.3.3	Buildings	277
12.3.4	BN -Pairs of Finite Morley Rank	281
13	Bad Groups	287
13.1	Bad Groups	287
13.2	Bad Groups of Morley Rank 3	294
14	CN and CIT-Groups	300
14.1	CN-Groups	300
14.1.1	Proof of Theorem 14.2	301
14.1.2	Proof of Theorem 14.1	311
14.2	CIT-Groups	312
14.2.1	Introduction	312
14.2.2	Solvable CIT-Groups	313
14.2.3	Three Propositions	315
14.2.4	When G Has Infinite Disjoint Sylow 2-subgroups	317
14.2.5	Higman's Theorem	317
14.2.6	2-Local Subgroups	323
14.2.7	Classification of Simple CIT-Groups	325
14.2.8	Nonsimple CIT-Groups	330
A	Miscellaneous Results	331
A.1	Rings	331
A.1.1	Definitions and Generalities	331
A.1.2	Generalities on Rings of Finite Morley Rank	333
A.1.3	Semisimple Rings of Finite Morley Rank	337
A.1.4	Lie Algebras	340
A.1.5	Alternative Division Rings	341
A.2	Irreducible G -Modules	343
A.3	Linear Groups of Finite Morley Rank	346
A.4	Generic Normal Subgroups	347
B	Open Problems	352
B.1	The Four Key Problems	352
B.2	Outline of a Possible Classification	354
B.2.1	2-Sylow Theory	354
B.2.2	Characterizations of the Groups $\mathrm{PSL}_2(K)$	356

B.2.3	Characteristic 2 Type Groups	359
B.2.4	Odd Type Groups	359
B.2.5	Groups of Mixed Type	363
B.3	Auxiliary Questions	363
B.3.1	Automorphisms of Fields	364
B.3.2	Suzuki 2-Groups	364
B.3.3	Algebraic Groups	365
B.4	Other Problems	367
B.4.1	Different Classes of Groups	368
B.4.2	Permutation Groups and Geometries	369
B.5	Some Model Theoretical Properties	371
C	Link with Model Theory	372
C.1	Ranked Groups Have Finite Morley Rank	372
C.2	Rank on Elementary Extensions	374
D	Hints to the Exercises	378
	Bibliography	384
