Part I: Fischer's Theory	<i>page</i> 1
Introduction	1
1. Preliminaries	6
1. Categories	6
2. Elementary group theory	8
3. Permutation representations	12
4. Linear representations	14
5. Coxeter systems	16
2. Commuting graphs of groups	21
6. Graphs	21
7. Locally conjugate subsets of groups	25
3. The structure of 3-transposition groups	30
8. Basic results on 3-transpositions	30
9. The generalized Fitting subgroup of a 3-transposition group	33
4. Classical groups generated by 3-transpositions	39
10. The classical groups	39
11. Classical groups generated by 3-transpositions	44
5. Fischer's Theorem	58
12. A uniqueness lemma	59
13. Primitive 3-transposition groups	65
14. The case $O_2(\langle D_d \rangle) \not\leq Z(\langle D_d \rangle)$	70
15. The case $O_2(\langle D_d \rangle) \leq Z(\langle D_d \rangle) \geq O_3(\langle D_d \rangle)$	75
16. The Fischer groups	82
17. Epilogue: The proof of Fischer's Theorem	87

6. The geometry of 3-transposition groups	91
18. Fischer spaces	91
19. A result of M. Hall, Jr.	94
20. Beyond Fischer's Theorem	101
Part II: The existence and uniqueness of the Fischer groups	109
Introduction	109
7. Some group extensions	113
21. Some 2-cohomology	113
22. The Todd modules for the Mathieu groups	121
23. Central extensions, Schur multipliers, and $U_6(2)$	126
8. Almost 3-transposition groups	137
24. Sufficient conditions to be a 3-transposition group	137
25. Some results on 3-transposition groups	140
9. Uniqueness systems and coverings of graphs	147
26. Coverings and simple connectivity of graphs	147
27. Uniqueness systems	152
10. $U_4(3)$ as a subgroup of $U_6(2)$	157
28. The $U_4(3)$ lattice	157
29. The embedding of $U_4(3)/\mathbf{Z}_3$ in $SU_6(2)$	167
11. The existence and uniqueness of the Fischer groups	173
30. A characterization of $U_6(2)$	173
31. The uniqueness of groups of type $\tilde{M}(22)$	177
32. The uniqueness of groups of type $\tilde{M}(23)$	181
33. The uniqueness of groups of type $\tilde{M}(24)$	183
34. Groups of type F_{24}	185
35. The uniqueness of groups of type $\text{Aut}(F_{24})$	193
36. The uniqueness of groups of type F_{24}	195
Part III: The local structure of the Fischer groups	199
Introduction	199
12. The 2-local structure of the Fischer groups	201
37. Involutions and their centralizers in the Fischer groups	201

13. Elements of order 3 in orthogonal groups over $\text{GF}(3)$	211
38. Orthogonal groups	211
14. Odd locals in Fischer groups	226
39. Subgroups of odd prime order in $M(22)$	226
40. Subgroups of odd prime order in $M(23)$	233
41. Subgroups of odd prime order in $M(24)$	239
15. Normalizers of subgroups of prime order in Fischer groups	250
