<i>Preface</i>	ix	
<i>Note to the Reader</i>	xi	
<i>Notation</i>	xiii	
Chapter I	Representation Modules	1
1.1	Group algebras and modules	1
1.2	Reducible and irreducible modules	5
1.3	Semisimple rings and the Wedderburn structure theorem	8
1.4	Tensor products	13
1.5	The number of irreducible KG -modules	15
1.6	Indecomposable modules	20
1.7	Absolutely indecomposable and absolutely irreducible modules	24
1.8	Principal indecomposable modules	26
1.9	Composition factors and intertwining numbers	29
1.10	Notes and comments	32
Chapter II	Induced Modules and Characters	33
2.1	Induced modules	33
2.2	Clifford's theorem	37
2.3	Group characters	39
2.4	The theory of ordinary characters	43

2.5	Induced characters	48
2.6	Brauer's theorem on induced characters	52
2.7	Splitting fields	56
2.8	Notes and comments	60
Chapter III Modular Representations and Characters		62
3.1	The p -adic integers	62
3.2	p -adic algebras	65
3.3	Ordinary and modular representations	69
3.4	Lifting idempotents	73
3.5	The case where p does not divide $ G $	75
3.6	Modular characters	77
3.7	Cartan invariants, decomposition numbers, and orthogonality relations	79
3.8	Modular characters of p -solvable groups	84
3.9	Notes and comments	88
Chapter IV Blocks of Group Algebras		89
4.1	Blocks	89
4.2	Classifying modules, characters, and idempotents into blocks	93
4.3	Defect groups	100
4.4	Further analysis of the Cartan matrix and decomposition matrix	104
4.5	The characters in a block of given defect	107
4.6	Blocks of small defect	112
4.7	Notes and comments	114
Chapter V The Theory of Indecomposable Modules		116
5.1	Relatively projective modules	116
5.2	Vertices and sources	120
5.3	Green's theorem	123
5.4	The degrees of indecomposable modules	127
5.5	Vertices and defect groups	129
5.6	Restriction of indecomposable modules	130
5.7	Jordan's theorem in characteristic p	133
5.8	Notes and comments	140
Chapter VI The Main Theorems of Brauer		142
6.1	The Brauer homomorphism	142
6.2	Blocks with normal p -subgroups	144
6.3	The Brauer correspondence: The First Main Theorem	149
6.4	Extension of the First Main Theorem	152
6.5	Generalized decomposition numbers: The Second Main Theorem	157
6.6	Principal blocks: The Third Main Theorem	162
6.7	The characters in the principal block	164
6.8	Notes and comments	168

Chapter VII	Fusion of 2-Groups	169
7.1	Further results on generalized decomposition numbers	169
7.2	Some technical lemmas	174
7.3	Groups with Sylow 2-subgroups of type $(2^m, 2^m)$	178
7.4	Groups with quaternion Sylow 2-subgroups	184
7.5	Glauberman's Z^* -theorem	191
7.6	Notes and comments	196
Chapter VIII	Blocks with Cyclic Defect Groups	197
8.1	Extending characters from normal subgroups	197
8.2	Blocks with normal cyclic defect groups	199
8.3	Groups with cyclic Sylow p -subgroups	205
8.4	Some technical lemmas	206
8.5	Groups of order $g = pg_0$ with $p \nmid g_0$	208
8.6	Groups with a faithful representation of degree $d < \frac{1}{2}(p - 1)$	215
8.7	Criteria for normal Sylow p -groups	220
8.8	Notes and comments	226
