Contents

I. G - spaces 5 - 26

1. G-spaces 5 - 12

2. Intersection numbers and ordinary centralizer ring theory 13 - 26

II. Coherent configurations 27 - 51

1. Coherent configurations 27 - 31

2. Adjacency algebras 32 - 34

3. The Schur and orthogonality relations 35 - 40

4. The Krein conditions 41 - 44

5. Theorems of Wielandt and Frame 45 - 47

6. Rank 3 configurations and strongly regular graphs 48

7. Fusion 49 - 51

III. Monomial spaces 52 - 81

1. (G,A)-spaces 52 - 59

2. Endomorphism rings 60 - 68

3. Orbital characters 69 - 72

4. Weights 73 - 76

5. Ordinary representation theory 77 - 81

IV. Modular theory of monomial representations 82 - 104

1. Defect groups and vertices 82 - 85

2. The Brauer homomorphism 86 - 92

3. On Brauer's first main theorem 93 - 97

4. Extensions of §§ 2,3 98 - 101

5. On Brauer's second main theorem 102 - 104
