

## CONTENTS

Preface . . . . .	vii
Introduction . . . . .	1
1. Global Representation Theory . . . . .	11
2. Direct Integral Decomposition Theory . . . . .	65
2.1. Introduction . . . . .	65
2.2. Borel Structures . . . . .	69
2.3. Borel Spaces of Group Representations . . . . .	77
2.4. Definition of Direct Integrals of Representations . .	85
2.5. The Structure of Complete Boolean Algebras of Projections . . . . .	92
2.6. Direct Integral Decomposition of Representations. .	102
2.7. Comparison of Different Irreducible Decompositions. . . . .	112
2.8. Multiplicity Free Representations . . . . .	118
3. Connections between the Representations of a Group and Representations of its Subgroups. . . . .	125
3.1. The Kronecker Product . . . . .	125
3.2. Definition and Elementary Properties of Induced Representations . . . . .	130
3.3. The Reduction of Induced Representations for Finite Groups . . . . .	138
3.4. The Reduction of Induced Representations for Infinite Groups . . . . .	152

3.5. An Example of Non-uniqueness of Direct Integral Decompositions . . . . .	159
3.6. A Generalization of the Frobenius Reciprocity Theorem . . . . .	162
3.7. Systems of Imprimitivity . . . . .	170
3.8. The Analysis of the Representations of $G$ in terms of those of its Subgroups . . . . .	182
3.9. Examples . . . . .	194
3.10. The General Case. Projective Representations . . . . .	199
Appendix . . . . .	209
Bibliography . . . . .	359
