

Contents

Introduction	1
Chapter I. Structural theory of PSH-algebras.....	12
§ 1. Definitions and first results	12
§ 2. The decomposition theorem	21
§ 3. Universal PSH-algebra: the uniqueness theorem and the Hopf algebra structure	27
§ 4. Universal PSH-algebra: irreducible elements..	49
Chapter II. First applications	71
§ 5. Symmetric polynomials	71
§ 6. Representations of symmetric groups	86
§ 7. Representations of wreath products	93
Chapter III. Representations of general linear and affine groups over finite fields.....	107
§ 8. Functors $i_{U,\theta}$ and $r_{U,\theta}$	107
§ 9. The classification of irreducible representa- tions of $GL(n, F_q)$	110
§10. The P.Hall algebra	115
§11. The character values of $GL(n, F_q)$ at unipotent elements	128
§12. Degenerate Gelfand-Graev modules	138

§ 13. Representations of general affine groups	
and the branching rule	143
Appendix 1. Elements of the Hopf algebra theory	149
Appendix 2. A combinatorial proposition	155
Appendix 3. The composition of functors r and i .	167
