

# CONTENTS

Preface	xi
1. Free Groups	1
1.1 Definition and elementary properties	1
1.2 Existence of $F(X)$	4
1.3 Further properties of $F(X)$	7
Exercises	11
2. Schreier's Method	14
2.1 The well-ordering of $F$	14
2.2 The Schreier transversal	16
2.3 The Schreier generators	18
2.4 Decomposition of the set $A$	19
2.5 Freeness of the generators $B$	20
2.6 Conclusion	22
Exercises	24
3. Nielsen's Method	26
3.1 The finitely-generated case	26
3.2 Example 1	32
3.3 The general case	33
3.4 Further applications	34
Exercise	39
4. Free Presentations of Groups	41
4.1 Basic concepts	41
4.2 Induced homomorphisms	42
4.3 Direct products	44
4.4 Tietze transformations	45
4.5 van Kampen diagrams	51
Exercises	55
5. Some Popular Groups	58
5.1 The quaternions	58

5.2 The Heisenberg group	60
5.3 Symmetric groups	61
5.4 Semi-direct products	64
5.5 Groups of symmetries	66
5.6 Polynomials under substitution	68
5.7 The rational numbers	69
Exercises	72
6. Finitely-generated Abelian Groups	74
6.1 Groups-made-abelian	74
6.2 Free abelian groups	75
6.3 Change of generators	78
6.4 The invariant factor theorem for matrices	80
6.5 The basis theorem	83
Exercises	85
7. Finite Groups with few Relations	87
7.1 Metacyclic groups	88
7.2 Interesting groups with three generators	92
7.3 Cyclically-presented groups	95
Exercises	97
8. Coset Enumeration	100
8.1 The basic method	100
8.2 A refinement	108
Exercises	114
9. Presentations of Subgroups	116
9.1 The method	116
9.2 Alternating groups	118
9.3 Braid groups	119
9.4 von Dyck groups	121
9.5 Triangle groups	127
9.6 Free products	128
9.7 HNN-extensions	129
9.8 The Schur multiplier	132
Exercises	133

10. Presentations of Group Extensions	136
10.1 Basic concepts	136
10.2 The main theorem	138
10.3 Special cases	141
10.4 Finite $p$ -groups	143
Exercises	144
11. Relation Modules	146
11.1 $G$ -modules	146
11.2 The augmentation ideal	149
11.3 Derivations	151
11.4 Free differential calculus	153
11.5 The fundamental isomorphism	155
Exercises	159
12. An Algorithm for $N/N'$	160
12.1 The Jacobian	161
12.2 The proof	161
12.3 Example	162
Exercises	167
13. Finite $p$ -groups	168
13.1 Review of elementary properties	168
13.2 Power-commutator presentations	170
13.3 mod $p$ modules	173
Exercises	177
14. The Nilpotent Quotient Algorithm	178
14.1 The algorithm	178
14.2 An example	180
14.3 An improvement	184
Exercises	185
15. The Golod-Shafarevich Theorem	186
15.1 The proof	186
15.2 An example	188

15.3 Related results	189
Exercises	190
16. Proving some Groups Infinite	191
16.1 Dimension subgroups	191
16.2 The Gaschütz–Newman formulae	193
16.3 Newman’s criterion	196
16.4 Fibonacci update	199
Exercises	200
Guide to the literature and references	201
Index	211
Dramatis personae	216
