<b>Preface</b>	<b>vii</b>
<b>Part I      Modular Representations</b>	<b>1</b>
<b>1. Separable Algebras</b>	<b>3</b>
1.1. Generators and progenerators	4
1.2. Separable algebras	14
1.3. Characterizations of separable algebras	20
1.4. Formal properties of separable algebras	24
1.5. Subsidiary results	35
1.6. Characterizations of central separable algebras	41
1.7. Basic properties of central separable algebras	46
1.8. Central separable group rings	60
1.9. Hochschild's cohomology	66
1.10. Inertial subalgebras	73
<b>2. Cartan Invariants, Lattices and Decomposition Numbers</b>	<b>79</b>
2.1. Review of intertwining numbers	79
2.2. Review of Cartan invariants and Cartan matrices	82
2.3. Projective modules over algebras	88
2.4. Changing the characteristic in algebras	90
2.5. Modules over principal ideal domains	94
2.5.A Invariant factor theorem for matrices	94
2.5.B. Finitely generated modules	98

2.5.C. Pure submodules	105
2.5.D. The integral case	111
2.6. Extensions of $RG$ -modules	113
2.7. $A$ -lattices	118
2.8. Decomposition numbers and decomposition matrices	127
2.9. Irreducible lattices	134
<b>3. The Brauer - Swan theory</b>	<b>139</b>
3.1. Review of $p$ -modular systems	140
3.2. Grothendieck groups	152
3.3. The decomposition map	161
3.4. Lifting modules	167
3.5. Generalizations of the Witt - Berman's induction theorem	180
3.6. The Cartan map	192
3.7. The determinant of the Cartan matrices	197
3.8. Green's theorem on zeros of characters	200
3.9. The Cartan - Brauer triangle	203
3.10. Applications	210
3.11. An example	216
<b>4. Brauer Characters</b>	<b>223</b>
4.1. Definition and basic properties	224
4.2. An introduction to liftings of Brauer characters	238
4.3. Review of induced class functions	242
4.4. Induced Brauer characters	243
4.5. Induction theorems for Brauer characters	256
4.6. Brauer characters, decomposition numbers and Cartan invariants	259
4.7. Inner products of Brauer characters	263
4.8. Brauer character tables	274
4.9. Projective covers of factor groups	283
4.10. Principal indecomposable Brauer characters of factor groups	288
4.11. Clifford theory for Brauer characters	292
4.11.A. Notation and conventions	292
4.11.B. Restriction to normal subgroups	293
4.11.C. Extensions from normal subgroups	299

4.11.D. Induction from normal subgroups	306
4.12. Brauer's problem	311
4.13. Frobenius reciprocity for Brauer characters	313
4.14. Frobenius - Schur indicator for Brauer characters	320
4.14.A. Introduction	320
4.14.B. Totally isotropic subspaces	321
4.14.C. The Witt kernel	324
4.14.D. Dual lattices	327
4.14.E. Main results	330
4.15. Brauer characters and $p$ -rational characters	334
4.16. Some improvements of the Fong - Swan theorem	339
<b>5. Quadratic, Symplectic and Symmetric Modules</b>	<b>351</b>
5.1. Quadratic and symplectic forms	351
5.2. $G$ -invariant bilinear forms	355
5.3. Bilinear and quadratic forms on $RG$	370
5.4. Induced bilinear and quadratic forms	373
5.5. Symmetric forms and involutory algebras	378
5.6. Symmetric and symplectic $RG$ -modules	390
<b>Part II      Green Theory</b>	<b>397</b>
<b>6. Vertices and Sources</b>	<b>399</b>
6.1. Preliminary results	399
6.2. Vertices and sources : general coefficient rings	403
6.3. Vertices and sources : semilocal and local coefficient rings	413
6.4. Vertices and covering groups	426
6.5. Vertices, projective covers and Cartan invariants	435
6.6. Cyclic vertices	442
6.7. Vertices of inner tensor products	452
6.8. Vertices of outer tensor products	455
6.9. Vertices and wreath products	456
6.10. Generalized vertices and relative projectivity	462
6.10.A. Generalized relative projectivity	462

6.10.B. Vertex sets	471
6.10.C. Relative projective homomorphisms	475
6.11. Vertices and sources of lattices	488
<b>7. The Green Correspondence</b>	<b>497</b>
7.1. Preliminaries	497
7.2. The Green correspondence	501
7.3. Endomorphism rings of Green correspondents	512
7.4. Vertices, Green correspondence and Heller operators	523
7.5. The Green correspondence and normal subgroups	525
7.6. The Green correspondence and the Brauer lift	528
7.7. The Green correspondence and Brauer's induction theorem	531
7.8. The Green correspondence of simple monomial modules	534
7.9. An application : ranks of indecomposable lattices	536
<b>8. Virtually Irreducible Lattices</b>	<b>539</b>
8.1. Virtually irreducible lattices	539
8.2. Vertices and sources of virtually irreducible lattices	550
8.3. The Green correspondence of virtually irreducible lattices	559
8.4. Frobenius reciprocity for virtually irreducible lattices	570
<b>9. Almost Split Sequences</b>	<b>577</b>
9.1. Preliminary results	577
9.2. Projective homomorphisms and the trace map	585
9.3. Existence and introductory properties	593
9.4. More properties of almost split sequences	600
9.5. Induction of almost split sequences	608
9.6. The Green correspondence and almost split sequences	616
<b>10. The Green Ring</b>	<b>623</b>
10.1. Definitions and elementary properties	624
10.2. Green's transfer theorem	635
10.3. Decompositions related to restriction and induction	638
10.4. Species, vertices and origins	643

Contents	xiii
10.5. Conlon's decomposition	651
10.6. Nilpotent elements in Green algebras	656
10.7. Bilinear forms on Green rings	668
10.8. Nondegeneracy of bilinear forms	676
<b>Part III      Permutation Modules</b>	<b>683</b>
<b>11. An Introduction to Permutation Modules</b>	<b>685</b>
11.1. Preliminary results	686
11.2. Permutation $G$ -algebras	696
11.3. Transitive permutation modules	701
11.4. Conjugation action	709
11.5. Multiplicities of composition factors of $(1_P)^G$	711
<b>12. Hecke Algebras</b>	<b>721</b>
12.1. Preliminary results	721
12.2. A distinguished homomorphism into Hecke algebras	730
12.3. Fusion and permutation modules	737
12.4. The center of Hecke algebras	744
<b>13. <math>p</math>-Radical Groups</b>	<b>749</b>
13.1. Semisimplicity of $(1_P)^G$	749
13.2. $p$ -Radical groups : definitions and basic properties	756
13.3. Some classes of $p$ -radical groups	763
<b>14. <math>p</math>-Permutation Modules</b>	<b>771</b>
14.1. Definitions and basic properties	772
14.2. Dress's theorems	777
14.3. The Brauer morphism	781
14.4. Scott modules	792
14.5. Vertices of $p$ -permutation modules	799
14.6. Puig's theorem	804

<b>15. Burnside Rings</b>	<b>809</b>
15.1. $G$ -sets	810
15.2. Burnside rings	819
15.3. The Burnside homomorphism	826
15.4. Prime ideals	841
15.5. The Möbius function	852
15.6. Idempotents of Burnside rings	855
15.7. Restriction, induction and conjugation of $G$ -sets	860
15.8. The Burnside algebra functor	869
15.9. The unit group of Burnside rings	877
15.9.A. Rigidly graded rings	877
15.9.B. Main results	881
<b>Bibliography</b>	<b>887</b>
<b>Notation</b>	<b>941</b>
<b>Index</b>	<b>949</b>
