# CONTENTS

I Fundamentals of Topology and Group Theory ..... 1

1. Topological spaces ..... 1
2. Metric spaces ..... 2
3. Neighborhood systems ..... 5
4. Bases and subbases ..... 6
5. Separation axioms in topological spaces ..... 7
6. Nets and filters ..... 9
7. Compact, locally compact and connected spaces ..... 10
8. Mappings ..... 12
9. Direct products ..... 14
10. Uniform spaces and Ascoli's theorem ..... 15
11. Groups and linear spaces ..... 18

II Semitopological Groups ..... 27

12. The concept of a semitopological group ..... 27
13. Neighborhood systems of identity of a semitopological group ..... 29
14. Constructions of new semitopological groups from old 30
15. Embeddings of any group in a product group ..... 32
16. $\mathfrak{S}$-topologies and semitopological groups ..... 33

17. B- and C-types of semitopological groups ..... 36
18. Locally compact semitopological groups ..... 39

III General Theory of Topological Groups ..... 43

19. Translations in topological groups and some examples .. 43
20. Neighborhood systems of identity ..... 45
21. Separation axioms in topological groups ..... 48
22. Uniform structure on a topological group ..... 52
23. Subgroups ..... 53
24. Quotient groups ..... 57
25. Products and inverse limits of groups ..... 62

IV Locally Compact Groups ..... 67

26. General results on locally compact groups ..... 67
27. Classical linear groups ..... 72
28. Locally Euclidean groups ..... 79
29. Lie groups ..... 82

V Open Homomorphisms and Closed Graphs ... 85

30. Continuous and open homomorphisms..... 85
31. B($\mathscr{C}$) groups ..... 89
32. The open homomorphism and closed graph theorems .. 93

VI Haar Measure ..... 101

33. Measure and integration on locally compact spaces .... 102
34. Integration on product spaces and Fubini theorem ..... 109
35. Existence of an invariant functional ..... 110
36. Essential uniqueness of the Haar integral ..... 117
37. Computation of Haar integrals in special cases ..... 120

*Appendix to Chapter VI*

Cartan's proof of existence and uniqueness of Haar integral 124

VII Finite-dimensional Representations of Groups 127

38. Schur's lemma ..... 127
39. Orthogonality relations ..... 130
40. Orthonormal family of functions on metrizable compact groups ..... 134
41. Integral equations on compact groups ..... 138
42. The Peter-Weyl theorem ..... 146
43. Structure of metrizable compact groups ..... 153

VIII Duality Theory and Some of Its Applications 166

44. The concept and topologies of dual groups ..... 166
45. Dual groups of locally compact abelian groups..... 168
46. Dual groups of compact and discrete groups ..... 172
47. Some applications of duality theory ..... 172

IX Introduction to Banach Algebras ..... 191

48. Definitions and examples of Banach algebras ..... 191
49. The Gelfand-Mazur theorem ..... 193
50. Maximal ideal space and Gelfand-Naimark theorem..... 199

BIBLIOGRAPHY ..... 209

INDEX OF SYMBOLS ..... 211

INDEX ..... 215
