

TABLE OF CONTENTS

CHAPTER I: THE UNIVERSAL APPROACH	1
1. Definitions	1
2. The Stone-Čech Compactification of the Discrete Group T	5
3. The Action of βT on X	10
4. Pointed Flows and the Ellis Group	12
CHAPTER II: PROXIMAL FLOWS	17
1. Proximal and Distal Flows	17
2. Proximal and Weakly Mixing Flows.....	18
3. Strongly Amenable Groups	19
4. The Universal Proximal Flow	21
5. Examples of Proximal Flows	25
CHAPTER III: STRONGLY PROXIMAL FLOWS	30
1. Definitions	30
2. Affine Flows	32
3. Amenable Groups	34
4. A Countably Infinite Amenable Group has 2^c Different Invariant Means	37
5. Fixed Point Theorems	39
6. Disjointness	40
7. Proximal and Strongly Proximal	40
CHAPTER IV: THE FURSTENBERG BOUNDARY OF A LIE GROUP	42
1. Basic Facts from Lie Group Theory	42
2. Characterization of Amenable Lie Groups	46
3. Boundaries of Connected Lie Groups	48
4. The Boundaries of $\mathbb{S}L(n, \mathbb{R})$	51
5. Disjointness	52
6. Proximal Flows for Lie Groups	54
CHAPTER V: μ -HARMONIC FUNCTIONS	55
1. μ -Harmonic Functions and Amenability	55
2. Contractible Measures	58
3. Basic Facts from Probability Theory	60
4. The Poisson Flow Associated with μ	63
5. C.D.-Groups	67
CHAPTER VI: HARMONIC FUNCTIONS ON A SYMMETRIC SPACE	71
1. For \mathbb{G} Simple, K is a Maximal Closed Subgroup of \mathbb{G}	72
2. The Furstenberg Compactification of a Symmetric Riemann Space	74
3. Harmonic Functions on D	76
4. The Poisson Space Corresponding to \mathbb{G} and a Spherical Measure	82
5. The Case $\mathbb{G} = \mathbb{S}L(2, \mathbb{R})$	84

CHAPTER VII: EXPONENTIAL GROWTH, AMENABILITY AND FREE SUBGROUPS ON TWO GENERATORS	87
1. Exponential Growth	88
2. A Characterization of Strong Proximality which does not Depend upon Measures	92
3. A Non-Amenable Group Contains a Finitely Generated Subgroup of Exponential Growth	94
CHAPTER VIII: THE GENERALIZED BOHR COMPACTIFICATION, I	98
1. Group Extensions and Almost Periodic Extensions	99
2. The Generalized (Strong) Bohr Compactification	102
3. The Generalized Strong Bohr Compactification of a Connected Lie Group with Finite Center	104
CHAPTER IX: THE GENERALIZED BOHR COMPACTIFICATION, II	112
1. The τ -Topology on G	113
2. More about Group Extensions and Almost Periodic Extensions	120
3. The Quasifactors $\mathcal{A}(F)$ of M	122
4. G/H is the Generalized Bohr Compactification of the Discrete Group T	124
CHAPTER X: PI-FLOWS	127
1. RIC-Extensions	127
2. Still More about Almost Periodic Extensions	129
3. A Construction of RIC-Extensions	131
4. PI-Flows	134
5. A Basis for the τ-Topology	140
6. Ellis' Trick	142
7. Structure Theorems	144
BIBLIOGRAPHY	151
