CHAPTER I

Topological Spaces and Groups

1.0	Introduction	1
1.1	Spaces	1
1.2	Homeomorphisms	2
1.3	Basis	3
1.4	Topology of subsets	4
1.5	Continuous maps	4
1.6	Topological products	5
1.7	Compactness	6
1.8	Tychonoff theorem	9
1.9	Metric spaces	12
1.10	Sequential convergence	14
1.11	Topological groups	18
1.12	Isomorphism of topological groups	21
1.13	Set products	22
1.14	Products of closed sets	24
1.15	Neighborhoods of the identity	25
1.16	Coset spaces	26
1.17	A family of neighborhoods	28
1.18	Complete regularity	29
1.19	Homogeneous spaces	30
1.20	Local groups	31
1.21	Coset spaces of local groups	33
1.22	Invariant metric	34
1.23	Metric homogeneous space	36
1.24	Connectedness	37
1.25	The identity component G_0	39
1.26	Transformation groups	40
1.27	Locally euclidean spaces	44

CHAPTER II

Locally Compact Groups

2.0	Introduction	48
2.1	Compact subsets of topological groups	51
2.2	The class of locally compact groups	52

2.3	Open subgroups	53
2.4	Intersections of neighborhoods	55
2.5	Totally disconnected groups	56
2.6	Approximation by separable metric groups	58
2.7	Projective limits	59
2.8	Real continuous functions on groups	60
2.9	Remarks on transformation groups	61
2.10	Remark on non-separable groups	62
2.11	Separability properties of transformation groups	63
2.12	Homogeneous spaces	63
2.13	Relation of homogeneous space and coset space	65
2.14	Transitive groups and the identity component	66
2.15	The Hilbert fifth problem	67
2.16	Subgroups of Gl_n	71
2.17	Invariant integral	85
2.18	Uniqueness of the integral	92
2.19	Integrals on non-separable groups	94
2.20	Compact groups	97
2.21	Abelian groups	101
2.22	Existence of one-parameter subgroups	105

CHAPTER III

Groups with no Small Subgroups

3.0	Introduction	106
3.1	Generating sequences of sets	108
3.2	Smoothing functions Δ_m	111
3.3	An analytic lemma	114
3.4	Groups without small subgroups	119
3.5	Uniqueness of square roots	120
3.6	The family of one-parameter local groups	122
3.7	The set of n -th roots	127
3.8	A key lemma	130
3.9	Study of $(x(1/m)y(1/m))^m$	137
3.10	The exponential map	144
3.11	The adjoint representation	149
3.12	The kernel of the representation	151

CHAPTER IV

Approximation by Lie Groups

4.0	Introduction	153
4.1	One-parameter factor groups	153

4.2	Groups with no small subgroups	159
4.3	An extension theorem	164
4.4	Analytic coordinates	169
4.5	Small subgroups	172
4.6	Main approximation theorem	175
4.7	Inverse sequences	176
4.8	Existence of n -cells in a group	179
4.9	Finite-dimensional groups	181
4.10	The Hilbert problem	184
4.11	Subgroups and factor groups of Lie groups	186
4.12	Abelian groups	187
4.13	Two structure theorems	188
4.14	Faithful representation	190
4.15	Remarks on the non-metric case	192

CHAPTER V

Transformation Groups

5.0	Introduction	195
5.1	Simultaneous continuity of derivatives	196
5.2	Differentiability with respect to group parameters and local linearity at fixed points	203
5.3	Conjugacy of subgroups	215
5.4	Cross-sections	219
5.5	Periodic and pointwise periodic homeomorphisms	222
5.6	Simply connected homogeneous spaces	226

CHAPTER VI

Compact Transformation Groups

6.0	Introduction	229
6.1	Cross-sections and zero-dimensional groups	231
6.2	Finite-dimensional groups and orbits	236
6.3	Orbits which are manifolds	243
6.4	The orbit of an $(n - 1)$ -cell and application	246
6.5	$(n - 1)$ -dimensional orbits in E_n	250
6.6	Compact connected abelian groups in E_3	254
6.7	Compact connected groups in E_3	259
6.8	One-parameter transformation groups in E_3	268
6.9	Rigid geometrics of E_3	269
	Bibliography	272
	Supplementary Bibliography	280
	Index	287
