

Preface		ix
Chapter 0	Basic facts about uniform spaces	1
	Initial uniformities	6
	Final uniformities	9
	Pseudometrics	10
	Complete uniformities	13
	Completions	17
	Compact regular topological spaces	20
Chapter 1	The concept of a topological group; Ellis' theorem	22
	Ellis' theorem	26
	Neighborhoods of e	29
	Exercises	31
Chapter 2	Uniformities on topological groups	34
	Some statements related to uniform continuity	41
	Exercises	45
Chapter 3	Initial and final constructions, subgroups, and products	48
	Subgroups of topological groups	51
	Products of topological groups	55
	Exercises	61
Chapter 4	The operation of groups on topological and uniform spaces and on topological groups	64
	Groups operating on topological spaces	64
	Groups operating on uniform spaces	69
	Bases of final uniformities and final group topologies	73
	Groups operating on topological groups	80
	Exercises	82

Chapter 5	Quotient spaces, topological homogeneous spaces, and factor groups	85
	Topological homogeneous spaces	87
	Factor groups	92
	A local comparison of X/G and X for discrete G	94
	Uniform structures on quotient spaces X/G	96
	Uniformities on X/G induced by Hausdorff uniformities on $\mathcal{P}(X)$	103
	Exercises	106
Chapter 6	Isomorphism theorems and semidirect products	111
	Semidirect products	117
	Comparable topologies coinciding on a dense subset	130
	Exercises	131
Chapter 7	Invariant metrics and metrization	134
	Metrization of SIN-groups	138
	Exercises	145
Chapter 8	Cauchy filters and completeness	148
	Exercises	158
Chapter 9	Precompact sets	160
	Exercises	171
Chapter 10	Completions of topological groups	173
	Exercises	191
Chapter 11	Quotients of complete topological groups	195
	Exercises	221
Chapter 12	Properties which a topological group X inherits from a subgroup G and the corresponding quotient space X/G	224
	Exercises	235
Chapter 13	Čech-complete and almost metrizable topological groups	237
	Exercises	258
	Explanation of symbols and notations	262
	Bibliography	270
	Index	273
