

TABLE OF CONTENTS

Introduction	1
<u>Chapter I. Elementary facts and constructions</u>	
1. Preliminaries	8
2. Idempotents and their order	12
3. Ideals	19
4. How to get new semigroups from old ones	33
5. Summary of the main results of chapter I	41
6. Notes and references to chapter I	43
<u>Chapter II. Joint continuity</u>	
1. Baire machinery	47
2. Transport arguments	52
3. Consequences for the metrizable case	55
4. The general case	61
5. Getting joint continuity if the underlying space is an interval or the circle	72
6. Joint continuity in semigroups on suitable subsets of manifolds	80
7. A glimpse of the non-compact case	86
8. Summary of the main results of chapter II	95
9. Notes and references to chapter II	96
<u>Chapter III. Semigroup compactifications of groups</u>	
1. Generalities on compactifications of groups and semigroups	101
2. The associated function spaces	107
3. Imbedding problems and related questions	115
4. Isotropy groups	124
5. Centric subsemigroups	130
6. Semitopological compactifications of connected groups	141
7. Weak almost periodic compactifications which are groups with zero	150

8. Weak almost periodic compactifications which are semilattices of groups	153
9. Summary of the main results of chapter III	161
10. Notes and references to chapter III	164

Chapter IV. Semigroups living in manifolds

1. Peripheralality	168
2. Some examples	176
3. L -semigroups and M -semigroups	186
4. Isotropy groups and local cross-sections	193
5. Some properties of semitopological semi- lattices of groups	200
6. Applications of Smith theory	206
7. Product decompositions	212
8. M -semigroups of dimension 2 or 3	221
9. Summary of the main results of chapter IV	228
10. Notes and references to chapter IV	230

Appendix: Problems

1. The traditional topics of the theory of com- pact topological semigroups	232
2. The Wallace Program	235
3. Joint continuity	238
4. Compactifications	241
